QUIKCHEM® 8500 SERIES 2

Flow Injection Analysis System with Integrated IC Option Available

QuikChem® 8500 Series 2 Flow Injection Analysis System

PROVEN METHOD PERFORMANCE WITH HIGH PRODUCTIVITY

The Lachat QuikChem 8500 Series 2 Flow Injection Analysis System features high sample throughput and simple, but rapid, method changeover. The QuikChem 8500 Series 2 system maximizes productivity in determining ionic species in a variety of sample types—from sub-ppb to percent concentrations. More than 500 methods are available for environmental, agronomic and industrial applications—including EPA-accepted methods.

NEW FIA FEATURES

The Series 2 system is an update to the QuikChem 8500 FIA platform.

- Run up to 5 channels for high productivity analysis or dedicated operation.
- New 2-cm flow cell methods allow more signal for detection at lower levels.
- Run Omnion 3.0 software on Windows XP, Vista, or Windows 7 operating systems.
- Interface Omnion software in multiple languages including Spanish, German, French, Portuguese, and Italian.

MAXIMUM PRODUCTIVITY WITH FIA TECHNOLOGY

The QuikChem 8500 Series 2 system uses reliable, accurate Flow Injection Analysis (FIA) technology. FIA technology was developed when scientists processing large numbers of samples experienced productivity delays while using Segmented Flow Analysis (SFA). Innovations of Flow Injection Analysis include:

- Bubble elimination from the analytical stream.
- Reduced inner diameter of the reactor tubing.
- Precise injection of samples into the analytical stream.

TIME SAVINGS WITH IMPROVED ACCURACY AND QUALITY CONTROL

FIA technology produces analytical peaks with very rapid rise and recovery times and provides complete inter-sample washout to prevent carry-over between samples. Other FIA productivity characteristics include:

- Fast startup and shutdown times—approximately five minutes—for rapid method changeover.
- Rapid analysis times—typically 20 to 60 seconds—let samples be analyzed in near real-time while data quality can be monitored and controlled during the analysis.
- High sample through-put—typically 60 to 120 samples/hour.
- Broad working range—sub-ppb to percents.
- Wide dynamic range—typically two to three decades.

OVER 500 METHOD VARIATIONS AVAILABLE

The QuikChem 8500 Series 2 system uses reliable, accurate Flow Injection Analysis (FIA) technology. FIA technology was developed when scientists processing large numbers of samples experienced productivity delays while using Segmented Flow Analysis (SFA). Innovations of Flow Injection Analysis include:

- Methods that comply with EPA, ISO, and DIN standards.
- Customized method development available.
- Simple to run in-line preparation methods.
- Many new methods—including Lachat's new ultra-high throughput methods.
- Go to www.lachatinstruments.com to download the most current methods list and a complete list of EPA-approved and equivalent methods.

Sample Matrices*

waters/wastewaters
seawater/brackish water
soil extracts
plant/soil digests
fertilizer digests
food stuffs
beverages
detergents

chlor-alkali

feeds & forages
aqueous formulations
plating baths/mineral processing
bioreactor solutions
extracts of air sampling filters
tobacco extracts
non-aqueous samples
high purity water

Parameters*

Acidity	Cations (Ion	Erythromycin	Humic acid	Manganese	Phosphorus	Sorbic Acid
Alkalinity	Chromatography)	Ethanol	Hydrazine	Mercury	Polyvinyl Alcohol	Sulfur
Aluminum	Chlorate	Fluorine	Hydrogen peroxide	Metals	(PVA)	Sulfur Dioxide
Amylase	Chlorine	Formaldehyde	Hydroxide	Methanol	Potassium	Surfactants
Anions (Ion	Chromium,	Free Amino	Hypochlorite	Molybdenum	Protease	Thiocyanate
Chromatography)	Hexavalent	Nitrogen	lodine	Nickel	Pyruvate	Total amino acids
Ascorbic acid	Chromium, Total	Glucan	Iron	Nicotine	Rapid IC Anions	Uranium
Beryllium	Citric acid	(beta-Glucan)	Lactate	Nitrogen	Rapid Sulfate	Urea
Boron	CMC	Glucose	dehydrogenase	Organic Acids	Reducing sugars,	Zinc
Bromine	Color	Glutamate	(LDH)	Oxygen	total	
Calcium	Conductivity	Glutamine	Lactic acid, D(-)	Oxyhalides	Riboflavin	
Carbon	Copper	Glycerol	Lowry protein	Penicillin	Sebacate	
Carbon dioxide	Creatinine	Glycolate	(albumin)	рН	Silicate	
Catalase	Cyanide	Hardness, Total	Magnesium	Phenol	Sodium

QuikChem 8500 Series 2 Flow Injection Analysis System Options

ION CHROMATOGRAPHY OPTION

The QC8500 Series 2 system can use an ion chromatography (IC) option to compliment the FIA technology. When integrated with FIA or as a standalone instrument, the IC option adds the power to profile samples for a class of ionic species. While FIA is ideally suited for processing relatively large numbers of samples for a single analyte per injection, ion chromatography enables the determination of multiple ions from a single injection.

- Operation of FIA and IC simultaneously and independently on the same instrument platform.
- Shared use of several peripherals including sampler, dilutor, sampling pump, and data station.
- Uniform operating protocols.
- Training and support provided by a single, knowledgeable source.

ASX SERIES AUTOSAMPLERS

ASX-520 Autosampler

Accommodate large sample loads with up to 360 sample and 16 bulk standard positions for both calibration and QC standards.

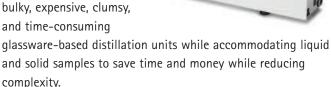

The integral wash bath ensures complete washout of the sampling line to prevent inter-sample carryover and cross-contamination.

ASX-260 Autosampler

Accommodate up to 180 samples and 10 standards in a compact, space-saving footprint.

MICRO DIST® —A REVOLUTION IN DISTILLATION TECHNOLOGY

With the MICRO DIST system from Lachat, distill up to 21 samples for cyanides, sulfide, and ammonia in 30 minutes; and phenolics and tritium in 90 minutes. The MICRO DIST system eliminates bulky, expensive, clumsy, and time-consuming

OMNION 3.0 SOFTWARE

Easy-to-use, but tremendously powerful and versatile, Omnion 3.0 software controls the operation of the QuikChem 8500 Series 2 system. This 32-bit software system is compatible with Windows 2000, XP, Vista, and Windows 7. Multiple language options are now available in the latest version. It is the first software package to offer a completely unified computing environment for both flow injection analysis and ion chromatography.

PRECISION DILUTOR SYSTEM

The PDS200 Dilutor System automates the preparation of working standards from a stock standard, estimates the concentration of off-scale samples, performs the required dilution, and re-runs the sample—automatically and without operator intervention.

QUIKCHEM® 8500 SERIES 2

Specifications*

Analysis Methods

FIA (Flow Injection Analysis); Integrated IC (Ion Chromatography)

Accuracy and Reproducibility

0.50%

Channels

5 maximum

Light Source

Tungsten halogen lamp

Detector

Dual beam photometer (340-880 nm)

Heating Unit

25 to 160°C (77 to 320°F)

Valve

High-performance 6 port injection sample valve

Filter Type

Interference filter

Reagent Pump

12 and 16 positions controlled by software

Diluto

Dilution factor 1.6-4000 steps

Mixing Coil

Teflon® tubing

Flow Cell

10 mm or 20 mm path length

Peak Measurement

Area/Height

Tube I.D

0.8mm/0.5mm

Injected Sample Volume

2μL-250μL

Sample Throughput

90 tests/hour/channel

Data Quality Control

Real time closed-loop control of data quality

Hardware

PC required for operation

Recommended Operating System

Windows 2000, XP, Vista, Windows 7

Software

32-bit Omnion 3.0

Data Quality Management enabled LIMS import/export capabilities

Multi-language supported

Dimensions (Width x depth x height)

5 channel unit= 70.1 x 61.0 x 25.1 cm (27.60 x 24.03 x 9.90 in)

2 channel unit= 70.1 x 40.6 x 25.1 cm (27.60 x 16.01 x 9.90 in)

Teflon® is a registered trademark and brand name of the DuPont Company.
