LOWESTOFT LABORATORY, LOWESTOFT, SUFFOLK, NR33 OHT, UK

2005 RESEARCH VESSEL PROGRAMME

PROGRAMME: RV ENDEAVOUR: CRUISE 8/05

STAFF: Tracy Dinmore (SIC)
Michaela Schratzberger (2IC)
Nick Dulvy
Matt Eade
Paul Eastwood
Chris Firmin
Carla Houghton
Nigel Lyman
Annie Meadows
Steve Milligan

DURATION: 21 May- 26 May 2005

LOCALITY: North Sea (ICES IVb)

AIMS:

The aim of this work is to describe the effects of fishing and the environment on production and food web structure during a seasonal production cycle. This is the second of five related cruises that have been scheduled for this purpose. The data collected will be used to parameterise size-based food web models and to describe how seasonal patterns of energy flow affect indicators of fisheries impacts on trophic structure, biomass and production.

The study will focus on the Silver Pit region of the central North Sea and the following work will be conducted:

- (1) Analysis of spatial and temporal variation in carbon and nitrogen stable isotope ratios close to the base of marine food chains (filter feeding infauna and zooplankton).
- (2) Analysis of relationships between body size, energy content and trophic level (from nitrogen stable isotope analysis) in space and time for zooplankton, benthic invertebrate and fish communities.
- (3) Analysis of relationships between body size and production for zooplankton, benthic invertebrate and fish communities.

PLAN:

RV ENDEAVOUR will sail from Lowestoft on 21 May 2005. She will work in ICES area IVb (UK waters only) throughout the cruise and will dock at Lowestoft on the 26 May 2005
