R/V BELGICA CRUISE 97/14.

Belgian GLOBAL CHANGE and sustainable development Programme

OMEX II - BIOGEOCHEMISTRY Programme

1. INTRODUCTION.

The RV Belgica cruise 97/14 has been conducted in the framework of the EEC MAST III, the Ocean Margin Exchange project "OMEX II", with the research efforts focussed on the upwelling zone along the Spanish coast, as well as the Belgian Global Change and sustainable development programme. For the latter, a two days sampling programme was executed on the La Chapelle Banc. The RV Belgica cruise 97/14 started on 18 June 1997 at Bordeaux, following the EC "BIOGEST" cruise which took place on the Gironde estuary.

On 19 June a shakedown station was carried out, 40 miles north to Gijón, in front of the Spanish coast. On 20 June a rendez-vous with the RRS Charles Darwin took place in position N 42 29 28 W 09 25 48 (station IC1A). Afterwards samples were exchanged between the two vessels at the Bay of Vigo. The RV Belgica arrived at Vigo on 20 June at 8h15 GMT for the embarkation of 5 foreign scientists.

The Belgica left Vigo on 21 June at 08h and started the transect O2T at 11h05. Although the weather conditions were not optimal, only 5 stations (11, 13, 23, 28 and 30) have been omitted while an additional intermediate station (V1) was added to the programme. After 9 days at sea, the Belgica arrived again at Vigo on 30 June at 8h.

The Belgica left the harbour of Vigo on 02 July and headed for Banc de la Chapelle where the stations 43 to 51 were sampled, station 47 being a 27 hours sampling station. The Belgica arrived at Zeebrugge on 07 July 1997.

Dr. M. Elskens (VUB) was the principal scientist aboard the BELGICA for this cruise. The following laboratories have participated :

- * Université de Liège (ULg) - Laboratoire d'Océanologie.
- * Université Libre de Bruxelles (ULB) - Laboratoire d'Océanographie.
- * Vrije Universiteit Brussel (VUB) - Laboratorium voor Analytische Scheikunde.
- * Instituto de Investigaciones Marinas (IIM), Vigo, Spain.
- * Forschungszentrum für Marine Geowissenschaften der Universität (Geomar), Kiel, Germany.
- * British Oceanographic Data Centre (BODC), Merseyside, UK.
- * Instituto Superior Técnico, Lisbon, Portugal.
- * Management Unit of the North Sea Mathematical Model (MUMM).

MUMM was mainly involved in the automatic data acquisition and logging of oceanographic,

meteorological and navigational data (ODASII computer logging, 74 Sea-Bird SCTD casts and 13 Sea-Bird light profile casts).

In addition to the data acquisition task, general assistance was offered in using the on board scientific instrumentation and related infrastructure, the Niskin bottle sampling, etc ...

Also samples for laboratory salinity and chlorophyll a measurements were taken, and these samples have been analyzed in MUMM's laboratory at Oostende.

The present report describes the computer logged oceanographic, meteorological and navigational data gathered during this cruise. Also the results of the laboratory salinity measurements are included.

2. COMPUTER LOGGED OCEANOGRAPHIC, NAVIGATIONAL AND METEOROLOGICAL DATA.

2.1. Navigational instrumentation

During this cruise, the data from the following navigational instruments connected to the shipborn computer system were logged by the so called Oceanographic Data Acquisition Software system "ODASII" :

- * SERCEL NR103 DGPS positioning system with an accuracy of 3 to 5 m using the Sercel beacons for differential corrections.
- * MAGNAVOX 200MX DGPS positioning system with an accuracy of ca. 5 m using IALA beacons for the differential correction .
- * Anshutz STD12 Gyro Compass.
- * Raytheon DSN450 Doppler speed log and bathymetric depth.
- * Atlas Deso 20 Scientific Echosounder.

The Atlas Deso 20 is equipped with 2 transducers (33 kHz and 210 kHz). The 33 kHz transducer has a depth range of ca. 1500 m in good weather conditions.

2.2. Oceanographic instrumentation

The seasurface temperature was measured continuously with the remote temperature sensor of the Sea-Bird SBE21 thermosalinograph as well as with a Rosemount temperature sensor, both installed at the inlet of the non-toxic seawater circuit situated at the bow of the vessel.

The Sea-Bird SBE21 thermosalinograph, installed in the wet lab, is also connected to the non-toxic seawater circuit. The salinity was measured continuously using a personal

computer with a dedicated software package from Sea-Bird. The processed data were continuously (every 6 sec.) transmitted to the HP1000/A400 data acquisition computer. The specifications of this thermosalinograph are found in table 1.

Parameter	Units	Range	Accuracy
TEMPERATURE	°C	-5 - +35	0.01 °C / 6 months
CONDUCTIVITY	S/m	0 - 7	0.001 S / m / month

Table 1. Sea-Bird SBE21 thermosalinograph specifications.

Salinity and density are calculated from conductivity, temperature and depth, in accordance to the 1978 Practical Salinity Scale from the IEEE Journal of Oceanic Engineering, January 1980.

A Turner Designs 10-AU-005 fluorimeter, also connected to the special seawater circuit, was used to measure chlorophyll concentrations during the full campaign. The data were also transmitted to the HP1000/A400 data acquisition computer.

At regular time-intervals samples have been taken from the seawater circuit in order to postcalibrate the SBE21 thermosalinograph and the Turner Designs fluorometer data.

The vertical light profiles have been taken with a LiCor LI-192-SA PAR sensor mounted on a Sea-Bird SBE19 SCTD profiler. The PAR sensor has a measuring range of 0 to 10.000 $\mu\text{mol s}^{-1} \text{m}^{-2}$ with an accuracy of 5 %.

SCTD vertical profiles have been taken with the Sea-Bird SBE09*plus* CTD profiler integrated with the Sea-Bird carousel water sampling system SBE32. The specifications of this CTD profiling system are given in table 2.

Parameter	Units	Range	Accuracy (guaranteed)
DEPTH	m	0 - 3000	0.1 % of full scale range
TEMPERATURE	°C	-5 - +35	0.01 °C / 6 months
CONDUCTIVITY	S/m	0 - 6	0.001 S / m / month
DIS. OXYGEN	$\mu\text{mol/kg}$	0 - 600	5 $\mu\text{mol / kg / day}$

Table 2. Sea-Bird SBE09*plus* specifications.

2.3. Meteorological instrumentation

Following parameters were measured by the Friedrichs meteorological station :

- windspeed
- winddirection
- airtemperature
- atmospheric pressure

In addition a solar radiation measuring device from Kipp & Zonen was installed.

The outputs of these sensors are analogous signals that are measured with the Hewlett Packard HP44701A 4 ½ digit digital voltmeter incorporated in the ODASII system. Table 3 gives a review of the specifications of the meteo sensors.

Parameter	Units	Range	Precision
WIND SPEED	m/s	0 - 41	0.2
WIND DIRECTION	degrees	0 - 360	2
ATMOSPHERIC PRESSURE	mbar	950 - 1050	1.5
AIR TEMPERATURE	°C	-35 - +45	0.2
SOLAR RADIATION	Watt/m ²	0 - 1000	10

Table 3. Meteo sensor specifications.

The meteosensors as well as the digital voltmeter are calibrated every year.

3. DATA ACQUISITION SYSTEM.

3.1. ODASII data acquisition and processing system.

A Hewlett Packard HP1000 Model A400 real-time minicomputer system with 26 RS-232 interfaces and a Hewlett Packard HP3852A data acquisition system (for analogous signals) were used to acquire meteorological, hydrological and navigational data at a 10 seconds interval.

The HP1000/A400 minicomputer is implemented as a black box. All input devices are connected through RS232 type interfaces to this real-time computer. The data acquisition software collects the sensor data and delivers this raw data to the data processing software implemented on a HP9000/748i-100 UNIX workstation. This on-line data processing software converts the raw data from the different input devices into physical units and stores the data in an Informix relational database.

The data presentation software is based on a Client Server model. The oceanographic data in the Informix database on the UNIX workstation are obtained on personal computer through a local area network (thin ethernet LAN). These personal computer presentation units are installed in the labs, in the computerroom and on the bridge and are accessible by all scientists on board for the production of real-time listings, graphs and trackplots.

3.2. SCTD - Horizontal profiling system.

The Sea-Bird SBE21 thermosalinograph data were recorded continuously to obtain horizontal salinity and water temperature profiles during the trajectories or time profiles at the fixed stations. The sensors are interrogated every 6 seconds using the dedicated Sea-Bird data acquisition and presentation software installed on a personal computer. The converted values were transmitted in real-time to the ODASII system.

3.3. SCTD - Vertical profiling system.

The Sea-Bird SBE09*plus* STD system measures the depth of the sensor package, water temperature, conductivity and dissolved oxygen at a rate of 24 samples per second. These data were averaged in the Sea-Bird deck unit over a 0.5 sec. time interval.

The averaged data are plotted in real-time on the PC display, allowing for an immediate decision of the water sampling depths. The Sea-Bird CTD software also allows to mark the SCTD data when water bottle samples are taken so that the SCTD and related parameters are known at the exact depth.

3.4. Data file inventory.

The underway data acquired with the ODASII system are stored in an Informix relational database. The references for these data are :

-campaign : ST9714A

-PDC : N9910S

The datafiles created with the Sea-Bird CTD systems during the BELGICA cruise 97/14 have the following file names.

Filename	Acquisition rate	Type of data	Duration
st9714an9910s1	10"	navig. + meteo + oceano.	Full campaign.
971400A.DAT to 971451A.DAT (for a complete list see appendix 1)	0.5"	CTD vertical profile	Stations 00A to 51A.
L08A.DAT L08B.DAT L12A.DAT L14A.DAT L19A.DAT L26A.DAT L31A.DAT L37A.DAT L38A.DAT L38B.DAT L40A.DAT L42A.DAT L47A.DAT	0.5"	Light profile	Stations 08, 12, 14, 19, 26, 31, 37, 38, 40, 42 and 47.

Table 4. Data file inventory.

These file names or derivatives occur on the different listings and plots.

4. REMARKS CONCERNING DATA ACQUISITION AND DATA VALIDITY.

4.1. Position registration.

During the whole OMEX cruise, the DGPS based navigation system Sercel NR103 was used as the primary positioning instrument. The Magnavox MX200 DGPS system was used as a backup system.

4.2. Salinity measurements.

4.2.1. Validation of the SCTD salinity measurements.

During the campaign vertical SCTD profiles have been taken with the SBE model 09*plus* SCTD system. The SBE09*plus* SCTD system was equipped with two SBE-3 temperature sensors and two SBE-4 conductivity sensors. The second pair of sensors was only used at two SCTD stations (stations 0A and 43A).

At different locations and multiple depths water samples have been taken to validate the salinity data of the SBE09*plus* system. The water samples have been analysed in MUMM's laboratory at Oostende with a Guildline Portasal Model 8410 laboratory salinometer.

The Guildline Portasal salinometer is calibrated using IAPSO standard seawater capsules obtained from Ocean Scientific International (UK).

The results of the Guildline Portasal salinometer have been compared with the Sea-Bird SBE09*plus* salinity measurements (see Table 3, Appendix 7 and Figure 4, Appendix 7).

	Standard deviation ppt	Mean error ppt	Corrolation coëff.
SBE09 <i>plus</i> - Guildline leg b	0.00165	0.01508	0.99994
SBE09 <i>plus</i> - Guildline leg c	0.00425	0.01992	0.99944
SBE09 <i>plus</i> - Guildline leg d	0.00232	0.02383	1

The salinity and the density data in table 2 (Appendix 4) have been corrected for these mean errors as follows :

corrected salinity : leg b : measured salinity - 0.015
leg c : measured salinity - 0.020
leg d : measured salinity - 0.024

corrected density : leg b : measured density - 0.012
leg c : measured density - 0.016
leg d : measured density - 0.019

4.2.2. Salinity spiking of the SCTD measurements.

In order to improve the performance of the salinity measurements, the Sea-Bird SBE09*plus* has a Temperature and Conductivity (TC) duct with an inertia-balanced pump flow.

The salinity spiking alignment computer program has been applied on the SCTD data (sampling speed 12 samples per second) to minimize the salinity spiking.
See also "JGOFS 90, RV BELGICA cruise 90/18, MUMM contribution Volume I : Report, J. Backers, A. Pollentier.".

4.3. Chlorophyll measurements.

The range of the Turner Designs 10-AU-005 fluorometer is set at MUMM's laboratory using a dilution of standard chlorophyll a in aceton. The blank is set with Milli-Q water. This setting is done to get a fixed reference only.

The fluorescence data available at MUMM - Oostende has been correlated to the chlorophyll data (Lorenzen method) of samples taken at regular intervals during the cruise (cfr BODC) :

leg b (against 8 discrete samples) : chlorophyll = $0.26978 + 0.04224 \times \text{fluorescence}$, $R^2 = 0.74$

leg c (against 42 discrete samples; split into two batches) :

prior to the jump : chlorophyll = $0.85252 + 0.07965 \times \text{fluorescence}$, $R^2 = 0.92$

after : chlorophyll = $1.12427 + 0.06266 \times \text{fluorescence}$, $R^2 = 0.93$

leg d (against 11 discrete samples, 1 deleted) : chlorophyll = $3.0078 + 0.10779 \times \text{fluorescence}$, $R^2 = 0.71$); when applied, calibration produced negative values for the period 02/07 18h10 to 03/07 11h30; that group of data was processed in a way that every negative value was set to zero.

(see plots in Appendix 3)

4.4. Irradiance measurements.

Appendix 6 gives the vertical profiles of light penetration (irradiance). Due to a problem with the logarithmic amplifier in the SeaCat profiler the data, especially in the low range, are of poor quality and should be interpreted with care.

4.5. Data validity.

One of the features of the ODASII package is that it verifies all subsystems, instruments and parameters interrogated.

To each parameter value, subsequently logged in the ODASII database, two bytes are added to take into account these data validity checks.

The validity is also shown on the data listings and transferred to the ASCII files. The following code is used :

Code	Meaning
M	Malfunction of a subsystem.
U	No update of the data since the previous logged value.
V	Data not valid (e.g. test on data string format failed).
D	Range error of the DVM subsystem.
R	Lower/upper range test.
G	Gradient test.
=	Not used.
S	Suspected data indication given by e.g. a positioning system.

5. REVIEW OF LISTINGS AND PLOTS IN APPENDICES.

APPENDIX 1 :

Table 1 gives the position, the waterdepth, the date and the time of the SCTD vertical profiles. All these profiles have been taken with the Sea-Bird SBE09*plus* SCTD system.

Figure 1 gives a map with a view of the trackplot and all the sampling stations while figure 2 and 3 show a detail of traject of the cruise 97/14, respectively leg c (Spanish coast) and leg d (Banc de la Chapelle).

APPENDIX 2 :

In figures 4 to 10, the vector averaged windspeed and direction, the air temperature, the solar radiation and the atmospheric pressure are plotted in function of time. These data were acquired with the Friedrichs meteo system, have been edited and have been averaged over a 10 minute time interval.

APPENDIX 3 :

In figures 11 to 17 the surface watertemperature, the salinity and the fluorescence are plotted in function of time. These data were acquired with the Sea-Bird SBE21 thermosalinograph and the Turner Designs fluorometer. The plotted data have been edited by BODC.

APPENDIX 4 :

The results of the Guildline Portasal salinometer have been compared with the Sea-Bird SBE09*plus* salinity measurements in Table 2 and Figure 4.

Table 3 gives the values of the oceanographic parameters at the SCTD water sampling points.

APPENDIX 5:

The vertical profiles of the temperature, the salinity, the density, the dissolved oxygen and the backscatterance are shown for all stations.

APPENDIX 6:

Finally, the graphplots of the incident light vs. depth for the stations 08, 12, 14, 19, 26, 31, 37, 38, 40, 42 en 47 are given.

APPENDIX 7 :

The results of the Guildline Portasal salinometer have been compared with the Sea-Bird SBE09*plus* salinity measurements in Table 3 and Figure 4.

Appendix 1.

Plot with station annotations and list of positions.

SERCEL NR103 : DGPS position

ATLAS DESO-20 : waterdepth
