R/V BELGICA CRUISE 99/19 - OMEX II

MUMM contribution - Track plots and sampling stations STD- profiles and horizontal profiles (S, T, fluorescence, meteo)

1. INTRODUCTION.

On 30th August 1999 the RV Belgica left Zeebrugge and headed for the Golf of Biskay La Chapelle Bank for the first part of the cruise 99/19 (**leg A**) which has been conducted in the frame of the Belgian Global Change and sustainable development programme. During **leg A** of cruise 99/19 stations 1 to 9 have been sampled and underway parameters were measured continuously.

The RV Belgica arrived in La Coruña (Spain) on the 3rd September for the embarkation of 7 additional scientists.

The second part (**leg B and leg C**) of the cruise 99/19 took place in the framework of the Ocean Margin Exchange project "OMEX II" (EEC MAST III programme) with the research efforts focussed on the up welling zone along the Spanish coast. The Belgica left La Coruña for **leg B** on the 4th of September and arrived in La Coruña again on the 11th. **Leg C** started on the 14th September and was finished on the 18th, one day earlier than planned due to bad weather conditions. During **leg B and leg C** 36 stations have been sampled in front of the Spanish coast. On 18th September 8 scientists were disembarked at La Coruña and then the Belgica left the harbour the same day and headed for Zeebrugge arriving at the home port on the 21st September.

Dr M. Frankignoulle (ULg) was the chief scientist for this cruise. The following laboratories have participated:

- * Management Unit of the North Sea Mathematical Model (MUMM), Belgium.
- * British Oceanographic Data Centre (BODC), Merseyside, U.K.
- * Université de Liège (Ulg) - Laboratoire d'Océanologie, Belgium.
- * Université Libre de Bruxelles (ULB) - Laboratoire d'Océanographie, Belgium.
- * Vrije Universiteit Brussel - Laboratorium voor Analytische Scheikunde, Belgium
- * Plymouth Marine Laboratory (PML), Plymouth, U.K.
- * University of Plymouth, Plymouth, U.K.
- * University of Algarve, Faro, Portugal.

MUMM was responsible for the automatic data acquisition and logging of oceanographic, meteorological and navigational data (ODASII computer logging) and the Sea-Bird STD and light profile casts.

In addition to the data acquisition task, general assistance was offered in using the on board scientific instrumentation and related infrastructure, the Niskin bottle sampling, etc ...

Also discrete water samples have been taken by MUMM for post cruise laboratory salinity measurements as well as Chlorophyll a samples. Both series of samples have been analysed at MUMM's laboratory situated in Oostende.

The present report describes the computer logged oceanographic, meteorological and navigational data, including the Sea-Bird STD data (81 casts) and the Sea-Bird light profile data (39 casts), gathered during this cruise . Also the results of the laboratory salinity measurements and the data of the analysed discrete chlorophyll samples have been included.

2. COMPUTER LOGGED OCEANOGRAPHIC, NAVIGATIONAL AND METEOROLOGICAL DATA.

2.1. Navigational instrumentation

During this cruise, the data from the following navigational instruments connected to the ship born computer system were logged by the Oceanographic Data Acquisition System "ODASII" :

- * SERCEL NR103 DGPS positioning system with an accuracy of 3 to 5 m using the Sercel beacons for differential corrections.
- * MAGNAVOX 200MX DGPS positioning system with an accuracy of ca. 5 m using IALA beacons for the differential correction .
- * Anshutz STD20 Gyro Compass.
- * Raytheon DSN450 Doppler speed log and bathymetric depth.
- * Atlas Deso 22 Scientific Echosounder.

The Atlas Deso 22 is equipped with 2 transducers (33 kHz and 210 kHz). The 33 kHz transducer has a depth range of ca. 1500 m in good weather conditions.

- * TSS 320B Heave Compensator.

The data of the Atlas Deso 22 echosounder are corrected for the heave by the TSS 320B.

- * Furuno Echosounder FCV381.

The Furuno is also equipped with 2 transducers (28 kHz and 88 kHz). Only the 28 kHz transducer with a depth range of ca. 2000 m in good weather conditions is used .

2.2. Oceanographic instrumentation

The sea surface temperature was measured continuously with the remote temperature sensor of the Sea-Bird SBE21 thermosalinograph as well as with a Sea-Bird SBE38 temperature sensor, both installed at the inlet of the non-toxic seawater circuit situated at the bow of the vessel.

The Sea-Bird SBE21 thermosalinograph, installed in the wet lab, is also connected to the non-toxic seawater circuit. The salinity was measured continuously using a personal computer with a dedicated software package from Sea-Bird. The processed data were continuously (every 6 sec.) transmitted to the HP1000/A400 data acquisition computer. The specifications of this thermosalinograph are found in table 1.

| Parameter | Units | Range | Accuracy |
|--------------|-------|----------|---------------------|
| TEMPERATURE | °C | -5 - +35 | 0.01 °C / 6 months |
| CONDUCTIVITY | S/m | 0 - 7 | 0.001 S / m / month |

Table 1. Sea-Bird SBE21 thermosalinograph specifications.

Salinity and density are calculated from conductivity, temperature and depth, in accordance to the 1978 Practical Salinity Scale from the IEEE Journal of Oceanic Engineering, January 1980.

A Turner Designs 10-AU-005 fluorimeter, also connected to the non toxic seawater circuit, was used to measure chlorophyll concentrations during the full campaign. The data were also transmitted to the HP1000/A400 data acquisition computer.

Frequently samples have been taken from the seawater circuit in order to postcalibrate the SBE21 thermosalinograph and the Turner Designs Fluorimeter data.

STD vertical profiles have been taken with the Sea-Bird SBE09*plus* STD profiler integrated with the Sea-Bird carousel water sampling system SBE32. The specifications of this STD profiling system are given in table 2.

| Parameter | Units | Range | Accuracy (guaranteed) |
|-----------------------|---------|----------|---------------------------|
| DEPTH | m | 0 - 3000 | 0.1 % of full scale range |
| TEMPERATURE | °C | -5 - +35 | 0.01 °C / 6 months |
| CONDUCTIVITY | S/m | 0 - 6 | 0.001 S / m / month |
| DIS. OXYGEN | µmol/kg | 0 - 600 | 5 µmol / kg / day |
| Backscatterance (OBS) | FTU | 0 - 200 | 2.5 % of full scale range |

Table 2. Sea-Bird SBE09*plus* specifications.

2.3. Meteorological instrumentation

Following parameters were measured by the Friedrichs meteorological station :

- wind speed
- wind direction
- air temperature
- atmospheric pressure

In addition a solar radiation measuring device from Kipp & Zonen was installed.

The outputs of these sensors are analogous signals that are measured with the Hewlett Packard HP44701A 4 ½ digit digital voltmeter incorporated in the ODASII system. Table 3 gives a summary of the specifications of the meteo sensors.

| Parameter | Units | Range | Precision |
|----------------------|---------------------|------------|-----------|
| WIND SPEED | m/s | 0 - 41 | 0.2 |
| WIND DIRECTION | degrees | 0 - 360 | 2 |
| ATMOSPHERIC PRESSURE | mbar | 950 - 1050 | 1.5 |
| AIR TEMPERATURE | °C | -35 - +45 | 0.2 |
| SOLAR RADIATION | Watt/m ² | 0 - 1000 | 10 |

Table 3. Meteo sensor specifications.

The meteo sensors as well as the digital voltmeter are calibrated at least once a year.

3. DATA ACQUISITION SYSTEM.

3.1. ODASII data acquisition and processing system.

A Hewlett Packard HP1000 Model A400 real-time minicomputer system with 26 RS-232 interfaces and a Hewlett Packard HP3852A data acquisition system (for analogous signals) were used to acquire meteorological, hydrological and navigational data at a 10 seconds interval.

The HP1000/A400 minicomputer is implemented as a black box. All input devices are connected through RS232 type interfaces to this real-time computer. The data acquisition software collects the sensor data and delivers this raw data to the data processing software implemented on a HP9000/748i-100 UNIX workstation. This on-line data processing software converts the raw data from the different input devices into physical units and stores the data in an Informix relational database.

The data presentation software is based on a Client Server model. The oceanographic data in the Informix database on the UNIX workstation are obtained on personal computer through a local area network (thin Ethernet LAN). These personal computer presentation units are installed in the labs, in the computer room and on the bridge and are accessible by all scientists on board for the production of real-time listings, graphs and track plots.

3.2. STD - Horizontal profiling system.

The Sea-Bird SBE21 thermosalinograph data were recorded continuously to obtain horizontal salinity and water temperature profiles during the trajectories or time profiles at the fixed stations. The sensors are interrogated every 6 seconds using the dedicated Sea-Bird data acquisition and presentation software installed on a personal computer. The converted values were transmitted in real-time to the ODASII system.

3.3. STD - Vertical profiling system.

The Sea-Bird SBE09*plus* STD system measures the depth of the sensor package, water temperature, conductivity and dissolved oxygen at a rate of 24 samples per second. These data were averaged in the Sea-Bird deck unit over a 0.5 sec. time interval.

The averaged data are plotted in real-time on the PC display, allowing for an immediate decision of the water sampling depths. The Sea-Bird STD software also allows to mark the STD data when water bottle samples are taken so that the STD and related parameters are known at the exact depth.

3.4. Data file inventory.

The underway data acquired with the ODASII system are stored in an Informix relational database and they have the following names :

- campaign : ST9919A
 - PDC : N9910S
 N1601S
 O990S5

| Filename | Acquisition rate | Type of data | Duration |
|----------------|------------------|-------------------------------|----------------|
| st9919an9910s1 | 10" | navig. + meteo + ocean. | Full campaign. |

Table 4.1 Data file inventory (ODAS II data).

The data files created with the Sea-Bird STD systems during the BELGICA cruise 99/19 have the following file names.

| Filename (*) | Acquisition rate | Type of data | Stations |
|-----------------------------------|------------------|-----------------------------------------|---------------------------|
| 991901.DAT ... 991950.DAT | 0.5" | STD vertical profiles | 1 to 9 and 11 to 50 |
| LI05A, LI05B, ... LI45A, LI45B | 0.5" | STD light penetration profiles | 5,44,45,29,30,11,33 |

Table 4.2 Data file inventory Sea-Bird data.

(*) for a complete list see appendix 1

These file names or derivatives occur on the different listings and plots.

4. REMARKS CONCERNING DATA PROCESSING AND DATA VALIDITY.

4.1. Navigational data.

During the whole OMEX cruise, the DGPS based navigation system Sercel NR103 was used as the primary positioning instrument. The Magnavox MX200 DGPS system was used as a backup system.

4.2. Meteorological data.

The meteo data are stored on board the Belgica in the Informix database with a 10 sec. interval. At the MUMM Measuring Service spikes have been eliminated while also the data have been averaged over a 10 min. interval. For the wind speed and - direction the data were vector averaged.

4.3. Oceanographic data.

4.3.1 Underway data.

4.3.1.1. Salinity calibrations.

The salinity data from the Sea-Bird SBE 21 thermosalinograph, connected to the non toxic seawater supply, have been compared with the data from the 79 discrete water samples taken during the cruise at regular intervals. The water samples have been analysed at MUMM's laboratory with the Guildline Portasal laboratory salinometer. An offset of - 0.004 (PSU) and a standard deviation of 0.006 (PSU) were observed. See appendix 7.

4.3.1.2. Chlorophyll measurements.

The range of the Turner Designs 10-AU-005 Fluorimeter is set at MUMM's laboratory using a dilution of standard chlorophyll a in acetone. The blank is set with Milli-Q water. This setting is done to get a fixed reference only.

The fluorescence data of the Turner Design fluorimeter have been correlated with the data of the analysed discrete chlorophyll samples taken at regular intervals during the cruise. The discrete chlorophyll samples have been analysed at MUMM's laboratory using the Lorenzen method.

The chlorophyll a concentration can be estimated from fluorescence as follows (see Appendix 8) :

$$\text{chlorophyll a } (\mu\text{g/l}) = -0.551 + 0.133 * \text{fluorescence,}$$

Correlation factor : $R^2 = 0.829$
 Degrees of freedom : $n = 81$

4.3.2 STD data

4.3.2.1 Validation of the STD salinity measurements.

During the campaign vertical STD profiles have been taken with the SBE model 09plus STD system. The SBE09plus STD system was equipped with a SBE-3 temperature sensor and a SBE-4 conductivity sensor.

At different locations and multiple depths water samples have been taken to validate the salinity data of the SBE09plus system. The water samples (68) have been analysed in MUMM's laboratory Oostende with a Guildline Portasal Model 8410 laboratory salinometer.

The Guildline Portasal salinometer is calibrated using IAPSO standard seawater capsules obtained from the Ocean Scientific Ltd (UK).

The results of the Guildline Portasal salinometer have been compared with the Sea-Bird SBE09plus salinity measurements (see Appendix 9).

| | Standard deviation | Mean error | Correlation coeff. |
|-----------------------|--------------------|------------|--------------------|
| SBE09plus - Guildline | 0.0035 | -0.0002 | 0.9998 |

4.3.2.2 Validation of the Backscatterance data.

During the cruise problems occurred with the backscatterance sensor on the SBE09plus CTD. Jumps in the data were observed and also an increase of the measured value with depth. All backscatterance data from campaign 99/19 measured later than 9th September 1999 13h15 GMT should be used with extremely care (stations 00, 12, 13, 14, 16, 20, 22, 33,36,37, 42, 43, 44c and 44d).

4.4. ODAS data quality monitoring.

One of the features of the ODASII system is the monitoring of the data quality of all subsystems, instruments and parameters interrogated.

To each parameter value, subsequently logged in the ODASII database, two bytes are added to take into account these data validity checks.

The validity is also shown on the data listings and transferred to the ASCII files. The following code is used :

| Code | Meaning |
|------|---------------------------------------------------------------|
| M | Malfunction of a subsystem. |
| U | No update of the data since the previous logged value. |
| V | Data not valid (e.g. test on data string format failed). |
| D | Range error of the DVM subsystem. |
| R | Lower/upper range test. |
| G | Gradient test. |
| = | Not used. |
| S | Suspected data indication given by e.g. a positioning system. |

5. REVIEW OF LISTINGS AND PLOTS IN APPENDICES.

APPENDIX 1 :

Table 1 gives the position, the water depth, the date and the time of the STD vertical profiles. All these profiles have been taken with the Sea-Bird SBE09*plus* STD system.

Figure 1 gives a map with a view of the track plot and all the sampling stations while figures 2 and 3 show details of the transects of the cruise 99/19.

APPENDIX 2 :

The wind speed and direction, the air temperature, the solar radiation and the atmospheric pressure are plotted in function of time. These data were acquired with the Friedrichs meteo system.

APPENDIX 3 :

The surface water temperature, the salinity and the chlorophyll a are plotted in function of time. These data were acquired with the Sea-Bird SBE21 thermosalinograph and the Turner Designs fluorimeter.

APPENDIX 4 :

Table 2 gives the values of the oceanographic parameters at the STD water sampling points.

APPENDIX 5 :

The vertical profiles of the temperature, the salinity, the density the dissolved oxygen and the backscatterance are shown for all stations.

APPENDIX 6 :

The graphplots of the incident light vs. depth of all light profile casts are given.

APPENDIX 7:

Comparison of the Sea-Bird SBE21 thermosalinograph salinity data versus the Guildline Portasal salinometer data (table and a figure)

APPENDIX 8:

Evaluation of the Turner Designs fluorescence data versus the analysed discrete chlorophyll a samples (table and figure).

APPENDIX 9:

Comparison of the Sea-Bird SBE09*plus* CTD salinity data versus the Guildline Portasal salinometer data (table and a figure)

Appendix 1

Plot with station annotations and list of positions

A. Comparison Guidline Portasal - SBE 09 (Marker Data)

1. Regression

Regression Output:

| | | |
|---------------------|----------|-----------|
| Constant | | -0.074436 |
| Std Err of Y Est | | 0.003515 |
| R Squared | | 0.999768 |
| No. of Observations | | 68 |
| Degrees of Freedom | | 66 |
| X Coefficient(s) | 1.002083 | |
| Std Err of Coef. | 0.001877 | |

2. Mean - Standard deviation - Confidence interval

| | |
|---------------------|--------|
| The Mean | 0.0002 |
| St. Dev | 0.0035 |
| Confidence interval | |
| -0.0068 | 0.0071 |

3. Frequency Distribution Table

Frequency Distribution table

| Class number | Class boundary | | Frequency |
|--------------|----------------|--------|-----------|
| 1 | < -0.015 | | 0 |
| 2 | -0.015 | -0.010 | 0 |
| 3 | -0.010 | -0.050 | 4 |
| 4 | -0.005 | 0.000 | 30 |
| 5 | 0.000 | 0.005 | 27 |
| 6 | 0.005 | 0.010 | 7 |
| 7 | 0.010 | 0.015 | 0 |
| 8 | > 0.015 | | 0 |
