Objectives and scientific background

The North Sea is a shallow shelf sea with a deep trough along the Norwegian coast with depth exceeding 700 m locally. Its physical status, primarily characterised by temperature and salinity, is to a large extent determined by the exchange of water masses with the Atlantic at its open northern boundary. There is also a link to Atlantic via the English Channel which is important for the shallow southern North Sea. The Baltic Sea is linked to the North Sea via Skagerrak, Kattegat, Great and Little Belt, and The Sound. The Baltic outflow with its low saline water influences significantly the oceanographic conditions of the Skagerrak and Norwegian Coastal Current. Other drivers are inter alia continental river run-offs, the ocean-atmosphere heat exchange, and the rate of precipitation to evaporation.

All parameters exhibit a strong seasonal and/or inter-annual variability. Seasonal heating leads to the establishment of a seasonal thermocline between spring and end of August/midst of September with vertical gradients exceeding 3 K/m in most of the years. Strength and depth of the thermocline vary locally and from year to year. Near-bottom tidal mixing and wind induced mixing at the surface suppress stratification in areas shallower than 25 to 30 m. Stratified and vertically mixed areas are separated by so-called tidal mixing fronts.

In order to assess the summer state of the North Sea the BSH started its North Sea Summer Surveys (NSSS) in 1998. They cover the entire North Sea with seven coast to coast east-west sections between 54° and 60°N and additional stations between 54°N and the entrance of the English Channel. The surveys were realised at a time when thermal stratification is expected to be at its maximum and phytoplankton production has passed its maximum. With the exception of the first survey in 1998 all surveys served a fixed grid of vertical CTD casts (see red dots in Fig. 1). Between these fixed stations a towed CTD-system (1998-2008 the

BSH *Delphin*, since 2009 an EIVA *MK2 ScanFish*) was deployed which oscillated between surface and bottom to record the distribution of relevant oceanographic parameters with high resolution in space and time (24 Hz). Both CTD-systems are recording temperature, salinity, fluorescence (chlorophyll-a, yellow substance), and oxygen concentration. Additionally, ship-mounted temperature-, salinity- and optical sensors provided data at about 4 m depth. In order to sample the transition area between North Sea and Atlantic the survey was expanded northwards to 62.5°N since 2010.

The objective of the NSSSs is the assessment of the oceanographic and chemical state of the North Sea, the calculation of heat and salt budgets, and the identification of changes due to climate change. The data are also used for the validation of operational and climate models and for the calibration of satellite-based ocean colour data and downstream products (Secchi depth, turbidity, CDOM, chlorophyll-a) which are used for assessments and MSFD reporting. All NSSSs are listed in Table 1. Most of the data are available via the German Oceanographic Data Centre (DOD) and the MERis MATCHup In-situ Database MERMAID.¹

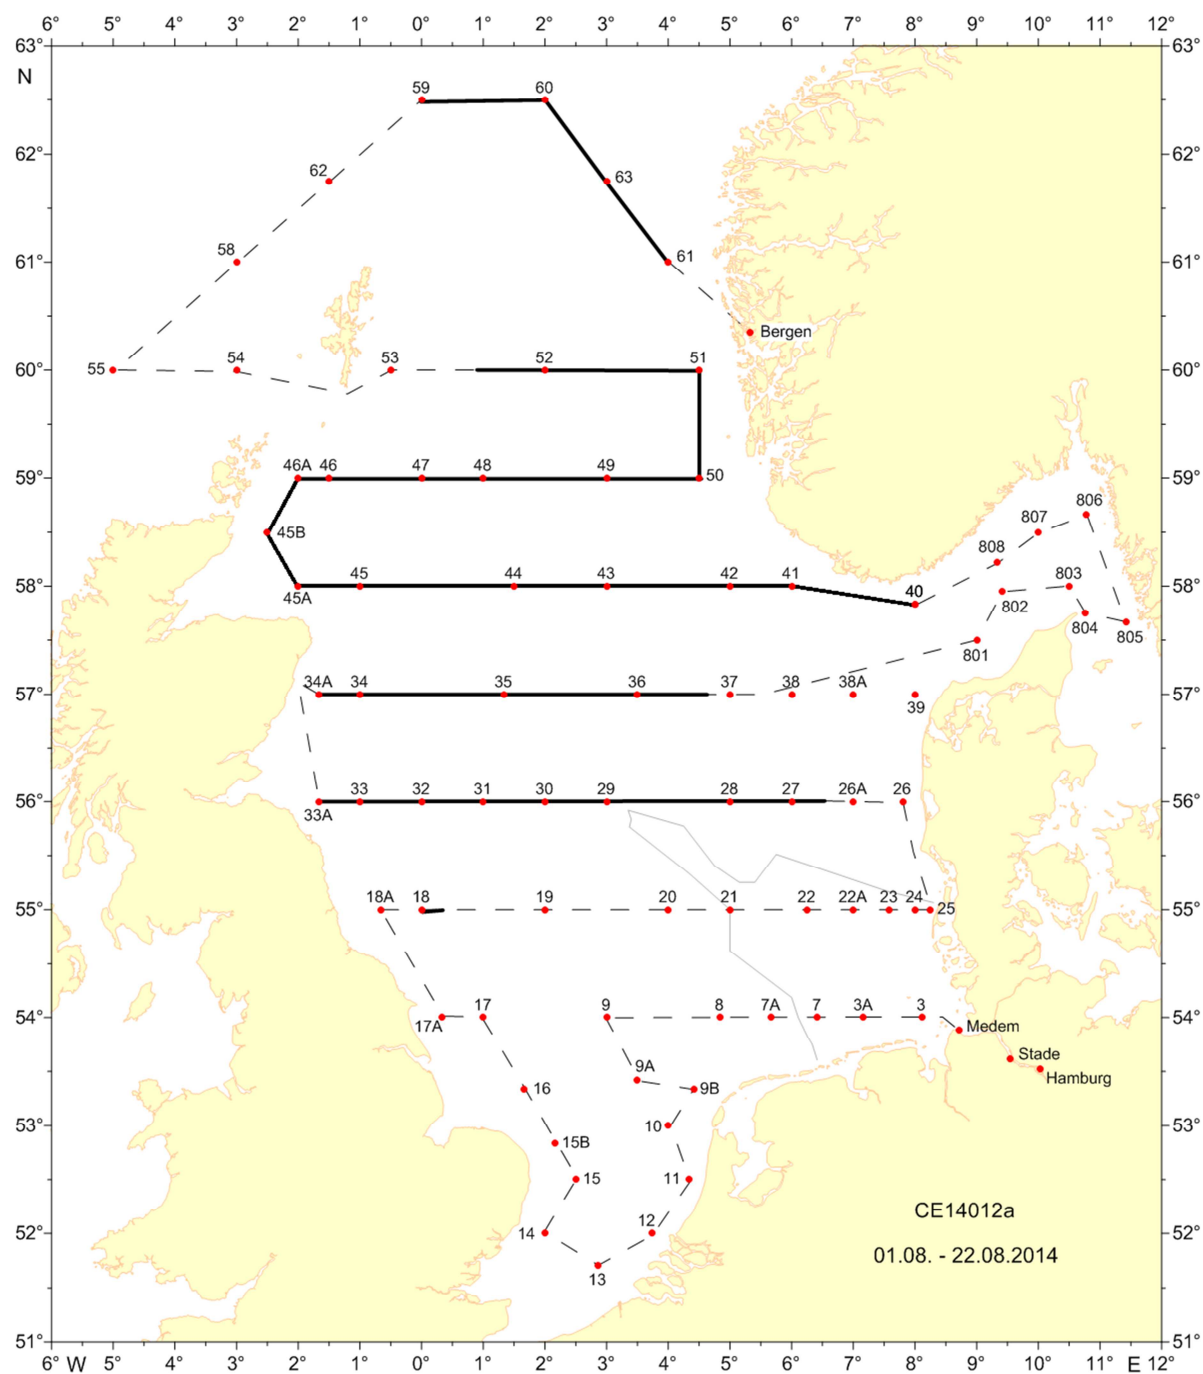

Fig. 1: Stations marked with an A or B are transit stations. The ScanFish was towed along the solid lines.

Equipment and Methods

Marine Physics:

- CTD Seabird SBE 911+ (SBE1, S/N 0577) with SBE 43 oxygen sensor, 3-Kanal Backscat II fluorimeter and rosette water sampler with twelve 10-liter bottles.
- ScanFish (SF1 = S/N 380, SF2 = S/N 390) with Seabird SBE 911+ CTD, AMT oxygen sensor, and TRIOS fluorimeter „TwinFlu“ (SF1, S/N 6811).
- Seabird thermosalinograph SBE 21 with turbidity and chlorophyll sensors.

Nutrients:

- Oxygen determination according to Winkler-Carpenter by means of a SIS Dissolved Oxygen Analyser (DOA) with photometric end point determination at selected depths.
- Continuous pH determination via the sea water pipe.
- Continuous phosphate, silicate (MiniMon) and nitrate determination (nitrate spectrometer) via the sea water pipe and daily reference samples.
- Determination of the pH value (CTD samples).
- Determination of depth of visibility by means of a Secchi disk at every daylight station.
- Filtration of surface water samples and freezing of the glass fiber filters for the determination of chlorophyll via Lorenzen photometry after the cruise.
- Determination of alkalinity of sea water.
- Extra samples for the UK Shelf Sea Biochemistry Programme:
 - Daily filtration of nutrient samples (polycarbonate filters) and freezing.
 - Daily surface samples for DIC/TA (they were poisoned with Mercuric chloride).

Radiochemistry:

- 2 x 35 l surface water for the extraction of strontium 90 after the cruise.
- One liter surface samples for the analysis of tritium after the cruise.
- 100 l surface samples for the determination of plutonium und americium on board.
- 270 l samples taken at selected stations at great depths for the determination of strontium and tritium after the cruise and of cesium, plutonium, and americium on board.
- At the above mentioned deep stations additionally 100 l surface water samples for the determination of plutonium and americium, which had been filtered before analysis in contrast to the other samples.
- 100-150 l surface water samples for the on-board analysis of cesium-137 by means of a ion exchanger.

Atmospheric Chemistry

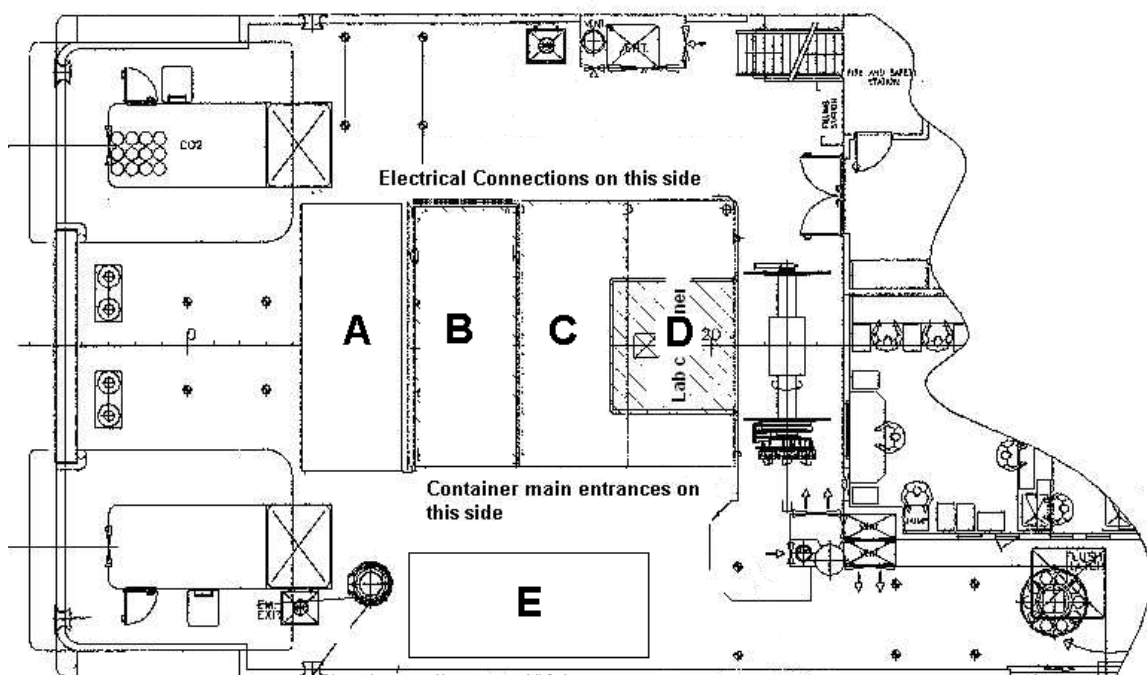

- Continuous trace gas analysis of nitric oxides (NO_x , NO und NO_2) by means of HORIBA APNA-370, of sulphur dioxide (SO_2) by means of HORIBA APSA-370 and of ozone (O_3) by means of HORIBA APOA-370.
- CO_2 and water vapor determination by means of LiCOR840a (Co. LiCOR).
- Recording of meteorological parameter like wind speed and direction, air temperature, air pressure and precipitation by means of the meteorological monitoring system WS-600-UMB (Co. Lufft) and data logger μIOx (Co. Gemi).

- Monitoring of current AIS signals in order to relate recorded emissions to ships passing windward.
- Collecting fine dust samples via a Riemer „High Volume Sampler“ Digital DHM-60 which will be analyzed for contaminants like sulfate and nitrate after the cruise.

Trace Metals:

- Sampling via MERCOS sampler and Clean CTD (plastic covered wire) with GoFlo sampler for the determination of the metal concentrations within sea water and suspended matter.

Container Plan for leg a & b

	container type	weight	power supply	used on leg
A	600 l drum for nutrients, no container!			1
B	Bottom: 20" M33 lab container, height 3.1 m (HM)	9	2 x 32 A	2
B	Top: 20"-flat with 2 winches: W5 (3.5 t) and W20 (1.8 t).	7 t	64 A	1
C	Bottom: 20" M34 lab container (organic)	9 t	1 x 32 A	2
C	Top: 10" Store container for marine chemistry	2 t	-	1&2
D	Bottom: 20" M32 lab container, fresh- und sea water (radioactivity)	5 t	32 A	1
D	Top: 2 x 600 l drum for sea water (calibration lab)			
E	20" Transport container radioactivity	9 t	-	1
F	20" Transport and store container	5 t	-	1&2

F: Bow position

Diary

All time specifications in Central European Summer Time (CEST = UTC + 2)

- ↓ Specifications regarding fixed stations, ship stops for vertical CTD profiles and water sampling
- SF ScanFish
- T Specifications regarding transit stations where water samples for radioactivity are taken from the sea water pipe during transit
- SF► Start of ScanFish profile
- SF◄ End of ScanFish profile
- W&S Weather & Sea: T_A = air temperature, T_W = water temperature at 4 m depth
- RA Radioactivity, sea water samples are taken for the following artificial nuclides: Cs-137 = cesium-137; Sr-90 = strontium-90; Pu = plutonium, H-3 = tritium

There are no data from the Seabird thermosalinograph SBE 21 available due to a blocked outlet and also no air temperatures due to sensor problems!

Watch table Marine Physics:

04-08/16-20: Jens & Peter
08-12/20-00: Andreas & Sören

Friday, August 1st, 2014

08:00: Arrival at Celtic Explorer, shed 72 (Kaiser-Wilhelm-Harbour).

08:30: Mobile crane arrives.

Three TV teams came on board (Hamburg 1, RTL Nord, Sat.1), interviews with chief scientist and crew. Telephone interviews with WDR.

11:30: Arrival of container and material, start of mobilization.

W&S 12:30: Bft. 2, 179°, 1012 hPa, clear sky.

17:30: Activities requiring the external mobile crane are finished.

The winch for Clean-CTD was installed in front of dry lab. Both ScanFish winches have been equipped with a new Rochester coax cable, 8.18 mm (Signal Transmission Cable, Code: SC0010132CO00, Part No. A320327) after the last cruise in 2013. We expect to reduce the electrostatic problems which occurred during the ScanFish launches during the last surveys. Further on we decided to reduce the tow velocity to 8 kn (through water, not over ground!).

18:30: Security instructions by the second mate Barry Hooper.

19:19 Short meeting of the marine physics group for a review of the work to be done in the next days: The new wire on both winches must still be terminated which needs 36 hours, the Cruise Assistance System has to be adopted to the new data distribution

system of the Celtic Explorer, the complete SF-system has to be tested after the repair by EIVA and the replacement of the communication unit, the new cable of winch W5 needs to be connected and a plug must be replaced.

After the meeting the CTD-system was completed and successfully tested.

Saturday, August 2nd, 2014

W&S 06:30: Bft. 3, 114°, 1010 hPa, clear sky.

06:38 Sailing.

↓ **08:28 – 08:44 Station Stade:**

GoFlo for metals und salinity.

RA: Cs-137: 150 L, Sr-90: 2x90 L, Pu: 100 L, H-3: 1 L.

↓ **11:38 – 11:52 Station Medem:**

GoFlo for metals und salinity

RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

W&S 12:00: Bft. 4, 120°, 1009 hPa, clear sky.

↓ **13:54 - 14:25 Station GN003 (Elbe 1):**

Secchi depth and CTD profile with rosette sampler.

RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

In the afternoon we took a first attempt to terminate the cable of the KC-winch. It took us about 4 hours, but the attempt fail because we were not able to place the cone in the center of the SF handle.

W&S 18:15: Bft. 4, 80°, 1006 hPa, clear sky.

T 18:10 – 18:24 Transit station GN003A:

RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

↓ **20:43 – 20:57 Station GN007 (Borkumriffgrund):**

Secchi depth and CTD profile with rosette sampler.

RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

The position of GN007 had to be changed to 53° 56' N, 006° 25' E due to a new wind park under construction!

W&S 22:00: Bft. 1, variable, 1006 hPa, cloudy.

T 23:31 – 23:46 Transit station GN007A:

RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

Sunday, August, 3rd, 2014

↓ **02:44 – 03:13 Station GN008:**

CTD profile with rosette sampler and GoFlo for metals.

RA: Cs-137: 150 L.

W&S 06:30: Bft. 5, 225°, 1006 hPa, cloudy, $T_w = 20.6$ °C.

In the morning second attempt to terminate the KC-winch. Now we succeeded and tested the link by hanging a 330 kg railroad wheel on the wire. It took us again 4 hours for three people to handle the wire.

- ↓ **09:48 – 10:05 Station GN009 (Outer Well Bank):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.
- W&S 12:15:** Bft. 4, 230°, 1009 hPa, clear sky, $T_w = 19.1$ °C.
- T 13:54 – 14:04 Transit station GN009A:** RA: Cs-137: 150 L.
- T 17:07 – 17:28 Transt station GN009B:**
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.
- W&S 18:30:** Bft. 2, 210°, 1011 hPa, clear sky, $T_w = 19.1$ °C.
- ↓ **19:31 – 19:52 Station GN010 (west of Den Helder):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L.
- ↓ ↓ **23:31 – 23:45 Station GN011 (west of IJmuiden)**
 CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L.

Monday, August 4th, 2014

- ↓ **03:59 – 04:22 Station GN012 (west of Hoek van Holland):**
 CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.
- W&S 07:00:** Bft. 2, 260°, 1014 hPa, cloudy, $T_w = 19.8$ °C.
- ↓ **08:52 – 09:19 Station GN013 (Rabsbank):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.
- ↓ **13:05 - 13:30 Station GN014 (Outer Gabbard):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.
- W&S 13:30:** Bft. 2, 225°, 1016 hPa, $T_w = 19.5$ °C.

The termination of the KC-winch is nearly finished and we tried to activate both SF systems with the new cable. One SF seems to be o.k., we got the CTD data and had contact to the SF controller. We also get the CTD data from the second SF, but no contact to the controller, i.e., we couldn't navigate the system. Because the CTD stations confirm a vertically mixed water body along the UK coast, the chief scientist decided to terminate the cable of the second winch (W5) tomorrow morning and to check the cabling and mechanics of the working SF carefully in the afternoon in order to start the SF survey along the 55 °N section to the east with two working winches because we expect a strong stratification due to the high STT values during the last weeks along some parts of this section.

↓ **17:28 – 17:44 Station GN015 (east of Lowestoft):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L.

W&S 18:00: Bft. 2, 200°, 1017 hPa, $T_w = 18.8$ °C.

We detected several cuts and damages at the plastic coated Kevlar cable of the Clean CTD. We covered the cuts with tape but have not been able to identify the reason for the cuts. Must have an eye on it during the next days.

T 19:55 – 20:14 Transit station GN015B: RA: Cs-137: 150 L.

↓ **23:44 – 00:09 Station GN016 (Haddock Bank):**
 CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

Tuesday, August 5th, 2014

↓ **05:11 – 05:32 Station GN017 (east of Flamborough Head):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

W&S 07:00: Bft. 2, 10°, 1018 hPa, clear sky, $T_w = 17.2$ °C.

T 07:51 – 08:16 Transit station GN017A:
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

W&S 12:00: Bft. 2, 100°, 1018 hPa, clear sky, $T_w = 18.3$ °C.

There is a problem with the K5 winch. It worked properly at Co. Hatlapa where they coiled the new cable onto the drum, but now the clutch is not working, i.e. we can't move the drum with the cable. Jens is working on the winch and tries to fix the problem.

T 15:04 – 15:19 Transit station GN018A: RA: Cs-137: 150 L.

SF► 17:41: Start SF profile 2 to station GN018 with SF1. (Profile 1 has been a test only!)

W&S 18:00: Bft. 4, 130°, 1016 hPa, $T_w = 18.5$ °C.

SF◄ 18:25: End of SF profile 2.

↓ **18:27 – 18:50 Station GN018 (Baymans Hole):**
 Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
 RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

SF► 19:03: Start SF profile 3, GN018 → GN019.

Profile must be cancelled due to communication problems between SF and deck unit.
After testing all cables and cable connections it showed up that sea water intruded into the termination of the cable at the SF handle.

SF ◀ 19:54: End of SF profile 3.

W5 is working again now and we can start to terminate this cable also.

W&S 00:00: Bft. 3, 180°, 1015 hPa, $T_W = 18.3$ °C.

Wednesday, August 6th, 2014

↓ **03:40 – 04:01 Station GN019 (Doggerbank):**
CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

W&S 07:00: Bft. 4-5, 170°, 1012 hPa, covered, $T_W = 15.2$ °C.

Perpared the new termination of the KC winch and tested the link with a 330 kg weight.

↓ **11:09 – 11:27 Station GN020 (east of Doggerbank):**
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

W&S 12:00: Bft. 3-4, 185°, 1012 hPa, $T_W = 19.5$ °C.

↓ **15:08 – 15:28 Station GN021 (Nordschillgrund):**
Secchi depth, CTD profile with rosette sampler.
RA: Cs-137: 150 L.

W&S 19:00: Bft. 4, 160°, 1012 hPa, $T_W = 20.4$ °C.

↓ **19:43 – 18:01 Station GN022 (Weiße Bank):**
Secchi depth, CTD profile with rosette sampler.
RA: Cs-137: 150 L.

T 22:27 – 22:37 Transit station GN022A: RA: Cs-137: 150 L.

W&S 23:00: Bft. 4, 180°, 1013 hPa, $T_W = 21.2$ °C.

Thursday, August 7th, 2014

↓ **00:37 – 00:54 Station GN023:**
CTD profile with rosette sampler.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

↓ **02:55 – 03:04 Station GN024:**
CTD profile with rosette sampler

↓ **04:06 – 04:21 Station GN025 (west of Sylt):**
Secchi depth, CTD profile with rosette sampler.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

W&S 07:00: Bft. 5-6, 185°, 1011 hPa, covered, $T_W = 21.2$ °C.

↓ **12:00 – 12:18 Station GN026 (west of Lyngvik):**
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

W&S 12:45: Bft. 5, 170°, 1011 hPa, covered, $T_w = 20.6$ °C.

Termination of winch W5 finished and tested.

T 15:40 – 15:53 Transit station GN026A:

RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

W&S 16:00: Bft. 3, 270°, 1012 hPa, cloudy, $T_w = 20.9$ °C.

SF► 17:41: Start SF profile 5, GN026A →GN027. (Profile 4 has been a test only!)

SF◄ 19:54: End of SF profile 5.

↓ 20:14 – 20:25 Station GN027:

Secchi depth, CTD profile with rosette sampler and GoFlo for metals.

RA: Cs-137: 150 L.

SF► 20:32: Start SF profile 6, GN027 →GN028.

W&S 21:00: Bft. 2, 305°, 1013 hPa, cloudy, $T_w = 20.5$ °C.

Friday, August 8th, 2014

SF◄ 00:44: End of SF profile 6.

↓ 00:58 – 01:12 Station GN028:

CTD profile with rosette sampler and GoFlo for metals.

RA: Cs-137: 150 L.

SF► 01:20: Start SF profile 7, GN028 →GN029.

W&S 07:00: Bft. 3-4, 290°, 1014 hPa, $T_w = 18.7$ °C.

SF◄ 09:47: End of SF profile 7.

↓ 10:04 – 10:17 Station GN029:

Secchi depth, CTD profile with rosette sampler.

RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

SF► 10:29: Start SF profile 8, GN029 →GN030.

W&S 12:00: Bft. 1, variable, 1014 hPa, clear sky, $T_w = 18.7$ °C.

SF◄ 14:31: End of SF profile 8.

↓ 14:41 – 14:57 Station GN030:

Secchi depth, CTD profile with rosette sampler and GoFlo for metals.

RA: Cs-137: 150 L.

SF► 15:05: Start SF profile 9, GN030 →GN031.

W&S 17:00: Bft. 4, 140°, 1011 hPa, clear sky, $T_w = 18.2$ °C.

SF◄ 19:22: End of SF profile 9.

↓ 19:26 – 19:45 Station GN031:

Secchi depth, CTD profile with rosette sampler and GoFlo for metals.

RA: Cs-137: 150 L.

SF► 19:55: Start SF profile 10, GN031 →GN032.

W&S 23:00: Bft. 5, 120°, 1006 hPa, covered, $T_w = 17.7$ °C.

SF◄ 23:57: End of SF profile 10.

Saturday, August 9th, 2014

↓ 00:10 – 00:23 Station GN032:

CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

SF► 00:34: Start SF profile 11, GN032 →GN033.

SF◄ 04:51: End of SF profile 11.

↓ 04:57 – 05:10 Station GN033 (east of Firth of Forth):

Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

SF► 05:15: Start SF profile 12, GN033 →GN033A.

W&S 07:00: Bft. 2-3, 10°, 999 hPa, covered, $T_w = 16.5$ °C.

SF◄ 08:03: End of SF profile 12.

↓ T 08:05 – 08:15 Transit station GN033A:

RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

We are going directly to Aberdeen to disembark our cook who has a medical problem with his eyes and to get a new cook onboard. Are running with 12 kn to be in time for the flight times of the cook, therefore no SF to GN034A.

W&S 12:00: Bft. 4, 300°, 998 hPa, $T_w = 13.9$ °C.

Position off Aberdeen: 57° 08.70' N, 002° 02.51' W, sailing 16:00.

T 17:14 – 17:26 Transit station GN034A:

RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

SF► 17:24: Start SF profile 13, GN034A →GN034.

SF◄ 18:27: End of SF profile 13.

Take the SF for a short inspection on board, because the fluorimeter and oxygen values are questionable.

SF► 18:53: Start SF profile 14, GN034A →GN034.

W&S 20:00: Bft. 4, 250°, 998 hPa, cloudy, $T_w = 15.1$ °C.

SF◄ 20:33: End of SF profile 14.

↓ 20:46 – 21:04 Station GN034 (Aberdeen Bank):

Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.
Change of TRIOS fluorimeter from SF2 to SF1.

SF► 21:11: Start SF profile 15, GN034 →GN035.

W&S 23:40: Bft. 5-6, 250°, 1002 hPa, clear sky, $T_w = 15.8$ °C.

Sunday, August 10th, 2014

SF◀ 04:51: End of SF profile 15

↓ 06:55 – 07:20 Station GN035 (Coal Pitt):
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

W&S 07:00: Bft. 3, 160°, 1004 hPa, covered, $T_w = 16.5$ °C.

During the deployment of the SF it was heavily hit by a wave which caused damage at the termination. The change from the KC to W5 winch required the disassembly of the meter wheel and the cable counter because the termination (handle) can't be passed through the block.

SF▶ 10:51: Start SF profile 16, GN035 →GN036.

Profile 16 has some short interruptions due to problems with the meter wheel.

W&S 12:00: Bft. 2-3, 90°, 1003 hPa, covered and rain, $T_w = 16.8$ °C.

W&S 18:00: Bft. 7-8, 130°, 996 hPa, covered, $T_w = 16.7$ °C.

SF◀ 19:23: End of SF profile 16.

↓ 19:27 – 19:47 Station GN036:
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

SF▶ 20:06: Start SF profile 17, GN036 →GN037.

SF◀ 22:18: End of SF profile 17 due to strong wind and high waves.

W&S 23:00: Bft. 8-9, 140°, 998 hPa, rain and thunderstorm, $T_w = 16.8$ °C.

Monday, August 11th, 2014

↓ 02:51 – 03:22 Station GN037 (Große Fischerbank):
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2x35 L, Pu: 100 L, H-3: 1 L.

W&S 07:00: Bft. 7-8, 190°, 991 hPa, covered, $T_w = 17.6$ °C.

W&S 12:00: Bft. 8, 210°, 994 hPa, covered, $T_w = 17.7$ °C.

Stations 38, 38A and 39 are canceled due to bad weather condition, CTD and SF measurements are not possible. Ship turns bow into the sea and stands by.

16:10: En route directly to station GN801.

W&S 18:00: Bft. 7-8, 220°, 999 hPa, cloudy, $T_w = 17.5$ °C.

Tuesday, August 12th, 2014

↓ 01:17 – 02:09 Station GN801:
CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

- ↓ **05:18 – 05:43 Station GN802:**
CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.
- W&S 07:00:** Bft. 4-5, 200°, 999 hPa, cloudy, $T_w = 18.0$ °C.
- ↓ **09:16 – 09:43 Station GN803:**
Secchi, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.
- ↓ **11:35 – 11:48 Station GN804:**
Secchi, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.
- W&S 12:00:** Bft. 4, 200°, 1002 hPa, cloudy, $T_w = 18.1$ °C.
- ↓ **14:18 – 14:30 Station GN805:**
Secchi, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.
- W&S 21:00:** Bft. 6, 220°, 1001 hPa, cloudy and lightning, $T_w = 18.0$ °C.
- ↓ **21:16 – 21:35 Station GN806:**
Secchi, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.

Wednesday, August 13th, 2014

- ↓ **01:31 – 02:07 Station GN807:**
CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L.
- ↓ **05:58 – 10:45 Station GN808:**
Secchi, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.
270-l-samplers for radioactivity at 50, 100, 250, 500 and 668 m depth, however, only the first two samplers closed properly due to strong tidal currents.
- W&S 09:30:** Bft. 5, 190°, 1000 hPa, cloudy, $T_w = 19.1$ °C.
- W&S 16:30:** Bft. 3-4, 180°, 998 hPa, covered, $T_w = 18.0$ °C.
- ↓ **16:48 – 18:20 Station GN040 (Skagerrak):**
Secchi depth, CTD profile with rosette sampler and GoFlo for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.
- SF► 19:02:** Start SF profile 18, GN040 → GN041.
- SF◄ 19:43:** End of SF profile 18 due to communication problems, possibly due to water in the termination.
- W&S 20:00:** Bft. 2, 210°, 998 hPa, cloudy, rain shower, $T_w = 19.1$ °C.

Thursday, August 14th, 2014

- ↓ **01:53 – 02:19 Station GN041 (west of Lindesnes):**
CTD profile with rosette sampler and GoFlo for metals.

W&S 07:00: Bft. 5-6, 0°, 1009 hPa, covered, $T_w = 13.0$ °C.

W&S 15:00: Bft. 6-7, 0°, 1010 hPa, covered, $T_w = 12.3$ °C.

↓ **19:34 – 20:33 Station GN058:**
Secchi depth, CTD profile with rosette.
RA: Cs-137: 150 L.

W&S 20:00: Bft. 7, 340°, 1011 hPa, covered, $T_w = 13.1$ °C.

Wednesday, August 20th, 2014

↓ **06:26 – 07:30 Station GN062:**
Secchi depth, CTD profile with rosette sampler.
RA: Cs-137: 150 L.

W&S 07:00: Bft. 5-6, 320°, 1008 hPa, covered, $T_w = 12.4$ °C.

W&S 11:30: Bft. 4-5, 340°, 1007 hPa, covered, $T_w = 13.0$ °C.

↓ **15:56 – 17:39 Station GN059:**
Secchi depth and CTD profile with rosette sampler.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L, and 600 L for testing and calibration.

SF► 17:47: Start SF profile 33, GN059 →GN060.

W&S 18:00: Bft. 4-5, 350°, 1007 hPa, cloudy, $T_w = 13.2$ °C.

Thursday, August 21st, 2014

SF◄ 00:35: End of SF profile 33.

↓ **00:43 – 01:12 Station GN060:**
Secchi depth, CTD profile with rosette sampler, and MERCOS sampler for metals.
RA: Cs-137: 150 L.

SF► 01:21: Start SF profile 34, GN060 →GN063.

W&S 07:00: Bft. 3, 340°, 1005 hPa, covered, $T_w = 14.1$ °C.

SF◄ 08:02: End of SF profile 34.

↓ **08:05 – 08:51 Station GN063:**
Secchi depth, CTD profile with rosette sampler, and MERCOS sampler for metals.
RA: Cs-137: 150 L.

SF► 08:55: Start SF profile 35, GN063 →GN061.

W&S 12:00: Bft. 2-3, 190°, 1006 hPa, covered, $T_w = 14.8$ °C.

Releasing 800 m cable from the KC winch and flushing of the cable with fresh water during coiling the cable onto the winch.

SF◄ 15:20: End of SF profile 35.

↓ **15:58 – 16:32 Station GN061:**
Secchi depth, CTD profile with rosette sampler, and MERCOS sampler for metals.
RA: Cs-137: 150 L, Sr-90: 2×35 L, Pu: 100 L, H-3: 1 L.

W&S 17:00: Bft. 2, 290°, 1006 hPa, cloudy, $T_w = 15.7$ °C.

23:00: Arrival in Bergen.

Friday, August 22nd, 2014

Disassembly of the oceanographic equipment related to the SF measurements and dismounting of the SF, all parts are flushed with fresh water, dried, and finally mounted together again. Chemical analyses and reprocessing of the last water samples for RA and metals.

Saturday, August 23rd, 2014

Continuations of the works from the previous day.

16:00: Exchange of the transport containers between forecastle and main deck by a land-based mobile crane.

Sunday, August 24th, 2014

16:00: Arrival of a new science crew for the second leg. Handover of the chemistry labs and logistic arrangements for the second leg. Preparation of next days the crew change.

Monday, August 25th, 2014

Crew change and return flight to Hamburg via Copenhagen.

Preliminary findings

With the exception of statements concerning the sea surface temperature (SST), all assessments are basing on raw data collected during the cruise. All temperature and salinity data will be processed and – if necessary – re-calibrated after the cruise.

In the month before the cruise the monthly means of the area averaged North Sea SSTs exceeded the climatological means by about 2 K. July 2014 was the warmest July since 1969 with an anomaly of +2.1 K. The weekly mean July 23rd – 29th directly before the cruise amounted to 18.1 °C, this is only 0.3 K below the records of the extremely warm years 2003 and 2006. During the week August 13th to 19th the area averaged North Sea SST dropped by 1.6 K!

The SST is a good representative for the temperature of the seasonal upper warm layer. Due to increasing solar radiation the North Sea established a seasonal stratification during spring over wide areas of the North Sea which last normally until end of August or beginning of September. Then the water column will be vertically mixed again by the first fall storms. The upper layer is separated from the colder bottom layer by a sharp thermocline with vertical gradients of the order of 3 K/m. While the oceanographic conditions in the upper layer are mainly determined by local radiation, the conditions in the bottom layer are influenced by the inflow of Atlantic Water (AW) with salinities >35 psu via the northern open boundary to the Atlantic and to a lesser degree via the English Channel. Only the knowledge of the hydrographic condition in both layers, determined by the spatial distribution of temperature and salinity, allows the calculation of heat and salt budgets.

The spatial structure of temperature distribution corresponds largely to that of the reference period (RP) 2000-2010 with upper layer depths between 20 and 30 m and the shallow south-eastern part of the North Sea vertically mixed. However, in 2014 the temperatures in the south-eastern North Sea exceed the RP by about 2 K. Reliable data about the strength of the vertical gradient can be provided not before the re-processing of the raw data. Also the temperature distribution of the bottom layer corresponds largely to that of the RP with the exception of the eastern part of the 58 °N section. Here the passage of ex-hurricane “Bertha” probably caused a vertical mixing inside the upper and bottom layer in the central and eastern part of the section.

Atlantic Water intruding from the northern boundary is traceable as a massive structure down to 57 °N and shaped as small lenses at 56 °N. Generally, the volume of AW is smaller as that of the RP. It is concentrated to the bottom layer and shows a reduced vertical extension. The inflow paths via the Fair-Isle-Channel and the East Shetland Shelf can be distinguished clearly along the 58 °N section.

Concerning SST the summer 2014 was significantly warmer as the climatological mean, this holds also for the volume of the south-eastern North Sea. The total salt content is expected to be below the long-term mean. However, quantitative assessments concerning the North Sea summer state 2014 will be possible not before the re-processing of the data at BSH.

2014

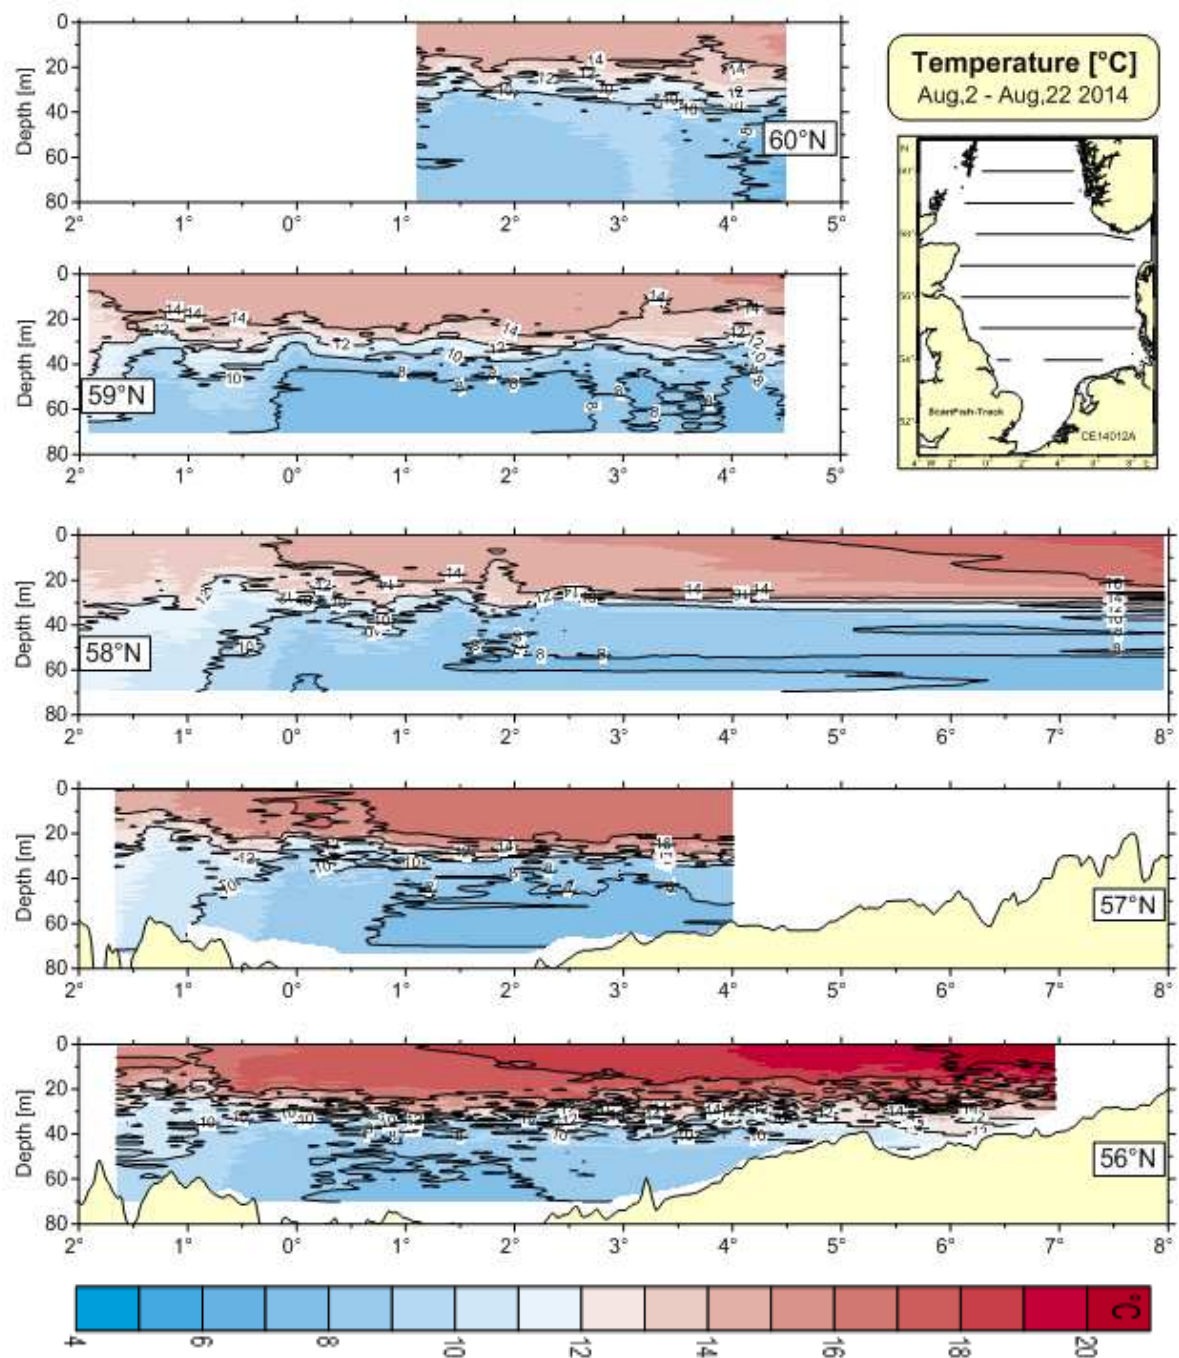

Fig. 2: Vertical temperature distribution along the zonal sections, ScanFish data.

2014

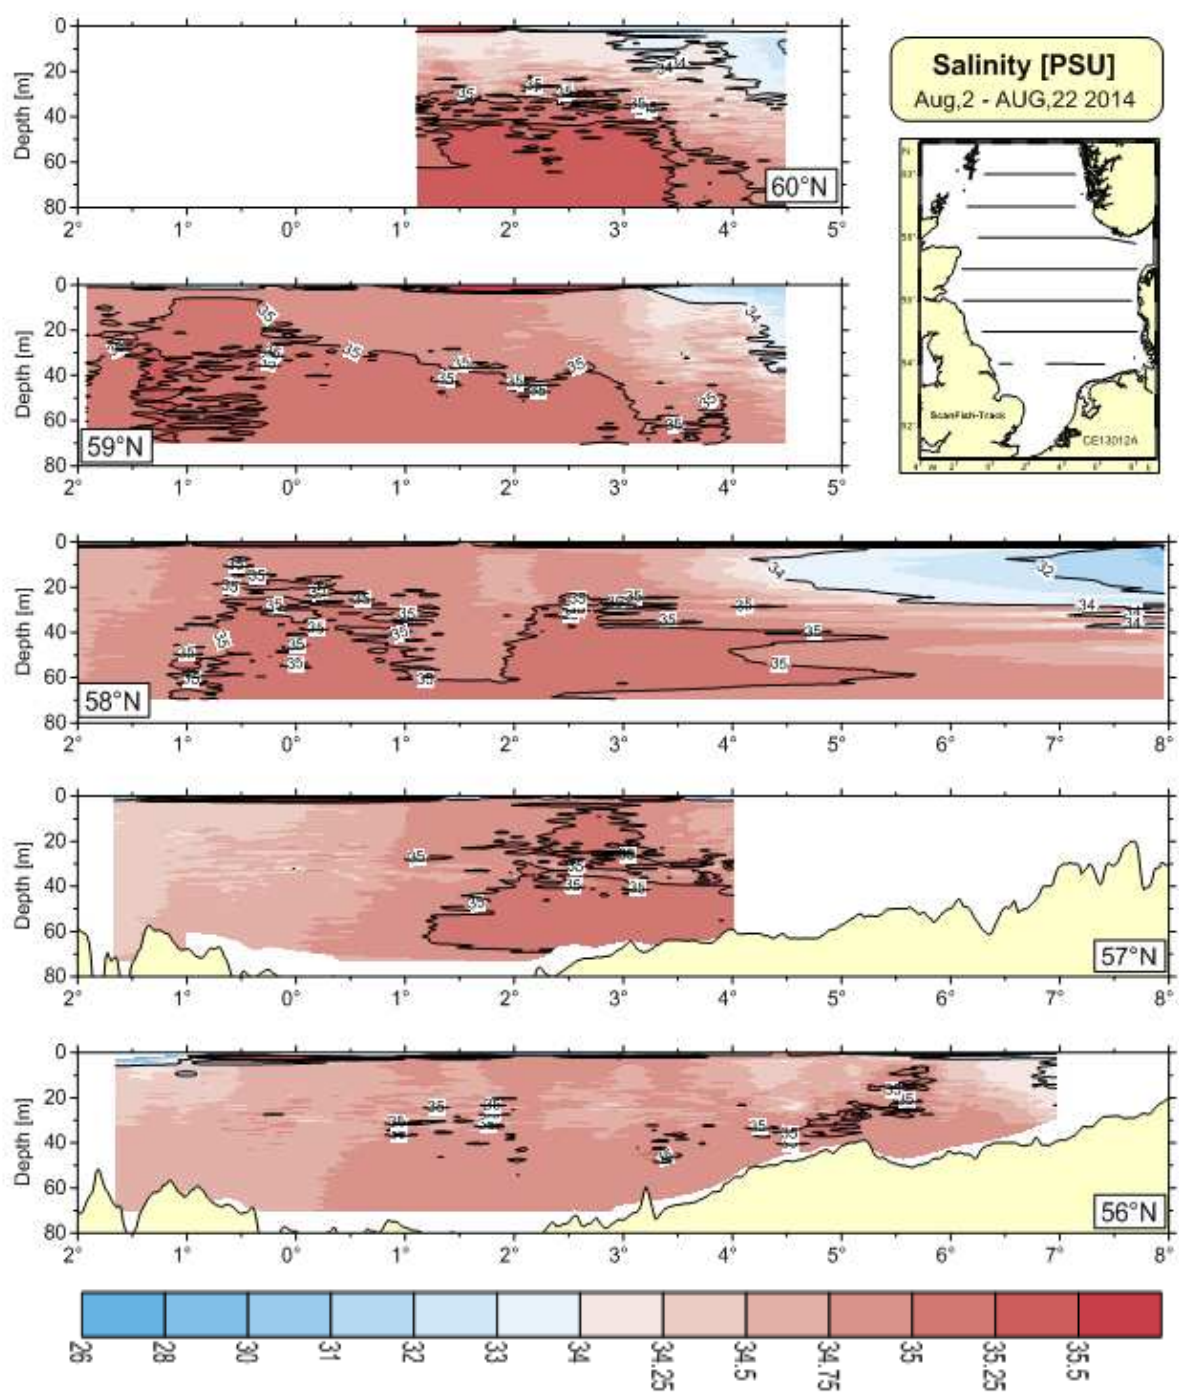

Fig. 3: Vertical salinity distribution along the zonal sections, ScanFish data.

Acknowledgement

Despite some technical problems the North Sea Summer Survey was a big success. All participants of the individual working groups accomplished a big amount of work.

The help and professional support of captain Antony Hobin and his crew is gratefully acknowledged.

Holger Klein

Bergen, August 25th, 2014

Appendix 1: List of samples

CTD-profiles with rosette:	61 stations
Secchi depth:	38 stations (daylight stations only)
Salinity:	204 samples
Transit stations for radioactivity:	14 stations
Dissolved nutrients	21 samples for the calibration of the auto-analyser
Oxygen:	132 samples
pH-value:	158 samples
Chlorophyll:	106 samples
Alkalinity:	224 samples
Extra samples for the UK Shelf Sea Biogeochemistry Programme:	18 nutrient samples 17 DIC/TA samples
Metals (TRFA, ICPUC, CUAAS, AAS):	45 stations 180 water samples 90 suspended matter samples 45 salinity samples
Radioactivity (artificial nuclides):	44 samples à 2 30-l-drums Strontium-90 (pure) 44 samples 1-l-bottles Tritium (pure) 44 samples à 100 l Plutonium (concentrated) 82 samples à 150 l Caesium-137 (concentrated)

Appendix 2: Station List

Positions are taken at the beginning of the stations! Radioactivity: Cs = Cesium-137; Strontium-90 = Sr; Plutonium = Pu; Tritium = H3
