Data Description C257

The cruise track for C-257 (Figure 1) departed from San Juan, Puerto Rico and to the same port 40 days later. During the nearly six-week voyage we had five port stops; the first in Marigot, St Martin; the next in Little Bay, Montserrat; the third in Portsmouth, Dominica; the fourth in St Georges, Grenada; and the last in St John, USVI.

Our cruise track traversed several major oceanographic provinces (Figure 1): a) the sub-tropical North Atlantic gyre or southern Sargasso Sea, b), the meandering North Equatorial Current and the warm waters of the c) North Eastern and d) South Eastern Caribbean Sea. We did not venture to windward of the Lesser Antilles during this cruise.

We collected data with 89 individual deployments from 44 discrete geographic stations along our cruise track (Table 2). Comparison of the physical, chemical, biologic and geologic features of these regions represented the major oceanographic theme of this Sea Semester.

1. Physical oceanographic studies focused on the distribution of surface and sub-surface (to 1900 m) water masses and the delineation of hydrographic boundaries. Specifically, North Atlantic sub-tropical mode water (18°C Water) was studied in relation to the phase of the North Atlantic Oscillation (NAO). In addition, we delineated the boundary between the NE and SE Caribbean Sea based on sea surface salinities and chlorophyll-*a* fluorescence.
2. Chemical oceanographic studies focused on the geographic and vertical distribution of nutrients (phosphate and silicate) and extracted chlorophyll-*a*. These chemical parameters were related to patterns in physical hydrography at various scales: nearshore to offshore transitions, ocean fronts and eddies associated with the North Equatorial Current and island passages, and water column stratification.
3. Biological studies focused on the geographic distribution of charismatic megafauna (seabirds, sea turtles, flying fish, and marine mammals), several meroplanktonic larvae including spiny lobster (*phyllosoma*) and eels (*leptocephali*), the floating macrophyte – *Sargassum* spp., and the density (mL/m²) and diversity (i.e. Shannon-Weiner index) of the aggregate zooplankton community.
4. Geological sampling focused on bathymetric transects of continental shelf regions of several Caribbean Islands. Patterns were related to island age and distance from shore.

Sea surface temperature, salinity, fluorescence (chlorophyll-*a* and CDOM) and transmissivity levels; along with barometric pressure, winds, bathymetry, and geographic position were recorded continuously along the cruise track. Large-scale hydrography is summarized with surface plots for some parameters (Figure 2a-c) other data is available upon request. Surface samples (62) of nutrients (phosphate and silicate) and chlorophyll-*a* were collected every six hours and in conjunction with all neuston net tows during the cruise track (Table 3).

Additional Hourly Observations included the enumeration of seabirds, sea turtles, flying fish, marine mammals, *Sargassum* spp clumps, and floating plastic debris. Observations occurred only during daylight hours 0700-1900 for a period of 6 minutes each hour (n=229). Periodically, opportunistic sightings were also recorded when notable megafauna or marine debris were present. Data available upon request.

But for the occasional eddy surface currents along the C257 cruise track were weak (< 500mm/s, or 1.0 knot) and variable in direction. Regional examination of surface currents highlight the presence of eddies and meanders near constricted island passages (Figure 3a-b).

The density structure of the water column (maximum depth 1000 m) was determined using a Seabird CTD with attached *in situ* chlorophyll-*a* fluorescence and dissolved oxygen sensors (16 stations, Table 4). Vertical profiles of extracted chlorophyll-*a* and nutrients were determined using a 12-bottle carousel equipped with a CTD and three additional *in situ* sensors – CDOM, transmissivity, and PAR (5 stations, Table 5). Vertical profiles of temperature, salinity, dissolved oxygen and chlorophyll-*a* fluorescence are revealed along the cruise track (Figure 4a-d).

Surface plankton assemblages along with the floating macrophyte *Sargassum* spp., marine debris and tar balls were sampled regularly with a neuston net (23 stations, 335 µm mesh, Table 6). Plankton assemblages at discrete depths (200m) were collected using a 1m diameter Meter net (3 stations, 335 µm mesh, Table 7). In combination these myriad net deployments reveal the vertical and horizontal distribution patterns of the marine insect *Halobates*, eel (leptocephali) and spiny lobster (phyllosoma) larvae, pteropods, and general zooplankton diversity and taxonomic composition in relation to numerous environmental parameters (Table 8).

Additional phytoplankton samples were collected with a surface (~1-3m) drifted phytonet (3 stations, 30cm frame, 63 µm mesh, Table 9) for demonstrational purposes only.

Eight sediment samples were collected using a shipek grab ranging in depth from 5 to 1200m. Additional data available upon request.

Discrete samples of *Sargassum* clumps and marine plastic debris were collected with a dip net (14 stations, 335 µm mesh, Table 11). Shrimp, crab, fish, and snail specimens were rinsed from collected samples. Abundance and diversity of associated biota were related to mass (g) and morpho-type of *Sargassum* and geographic location. Three distinct morphological types of *Sargassum* were recognized (*S. fluitans III*, *S. natans I*, and *S. natans VIII*) and clear differences in associated fauna were observed even when the *Sargassum* was collected from the same windrow.

Final scientific work conducted aboard ship was the routine deployment of a secchi disc (12 stations, Table 12) to estimate the 1% light level.

Additional CTD, CHIRP, ADCP and biological data not reported here are available on request through Sea Education Association (SEA) and the Chief Scientist. The information in this report is not intended to represent final interpretation of the data and should not be excerpted or cited without written permission from SEA.

As part of SEA's educational program, undergraduates conducted independent oceanographic research during the cruise. Projects explored regionally, relevant topics in the disciplines of physical, chemical, and biological oceanography (Table 13). Student research efforts culminated in a written report and public presentation to the ship's company. These papers are available on request from SEA.

Jeffrey Schell, Associate Professor – Chief Scientist, C257

Duplicate station numbers indicate multiple oceanographic deployments that either occurred concurrently in the same location or were deployed sequentially in the same general location after the vessel was hove to. General Locations are categorized by traditional oceanic biomes or significant geologic feature. Abbreviations for oceanographic equipment deployed are: NT – Neuston Tow, DN – Dip Net, MN – Meter Net, PN – Phytoplankton Net, CTD – conductivity, temperature, and depth profilers, HC – carousel deployment with 12 niskens bottles, SG – Shipek Grab, and SD – Secchi Disc

Surface water samples were collected using a clean, seawater flow-thru system (intake ~ 1-3m depth) with in-line temperature, salinity and *in vivo* chlorophyll-*a*, fluorescence sensors. Discrete water samples were collected for nd extracted chlorophyll-*a* (Chl-*a*) concentrations, measured with a Turner Designs Model 10-AU Fluorometer following methods outlined in Parsons, Maita and Lalli, *A Manual of Chemical and Biological Methods for Seawater Analysis*, Pergamon Press 1984. Chlorophyll-*a* samples were filtered through 0.45 µm filters. A blank space indicates that no sample was collected for that analysis. Sea surface temperature was measured with an inline electronic thermistor as part of a seawater flow-thru system (intake at 1-3m below surface) as well as with a surface bucket and alcohol thermometer.

Figure 3a-b. Surface current a) magnitude and b) direction during C257. Note, 500 mm/s is approximately 1.0 knot.

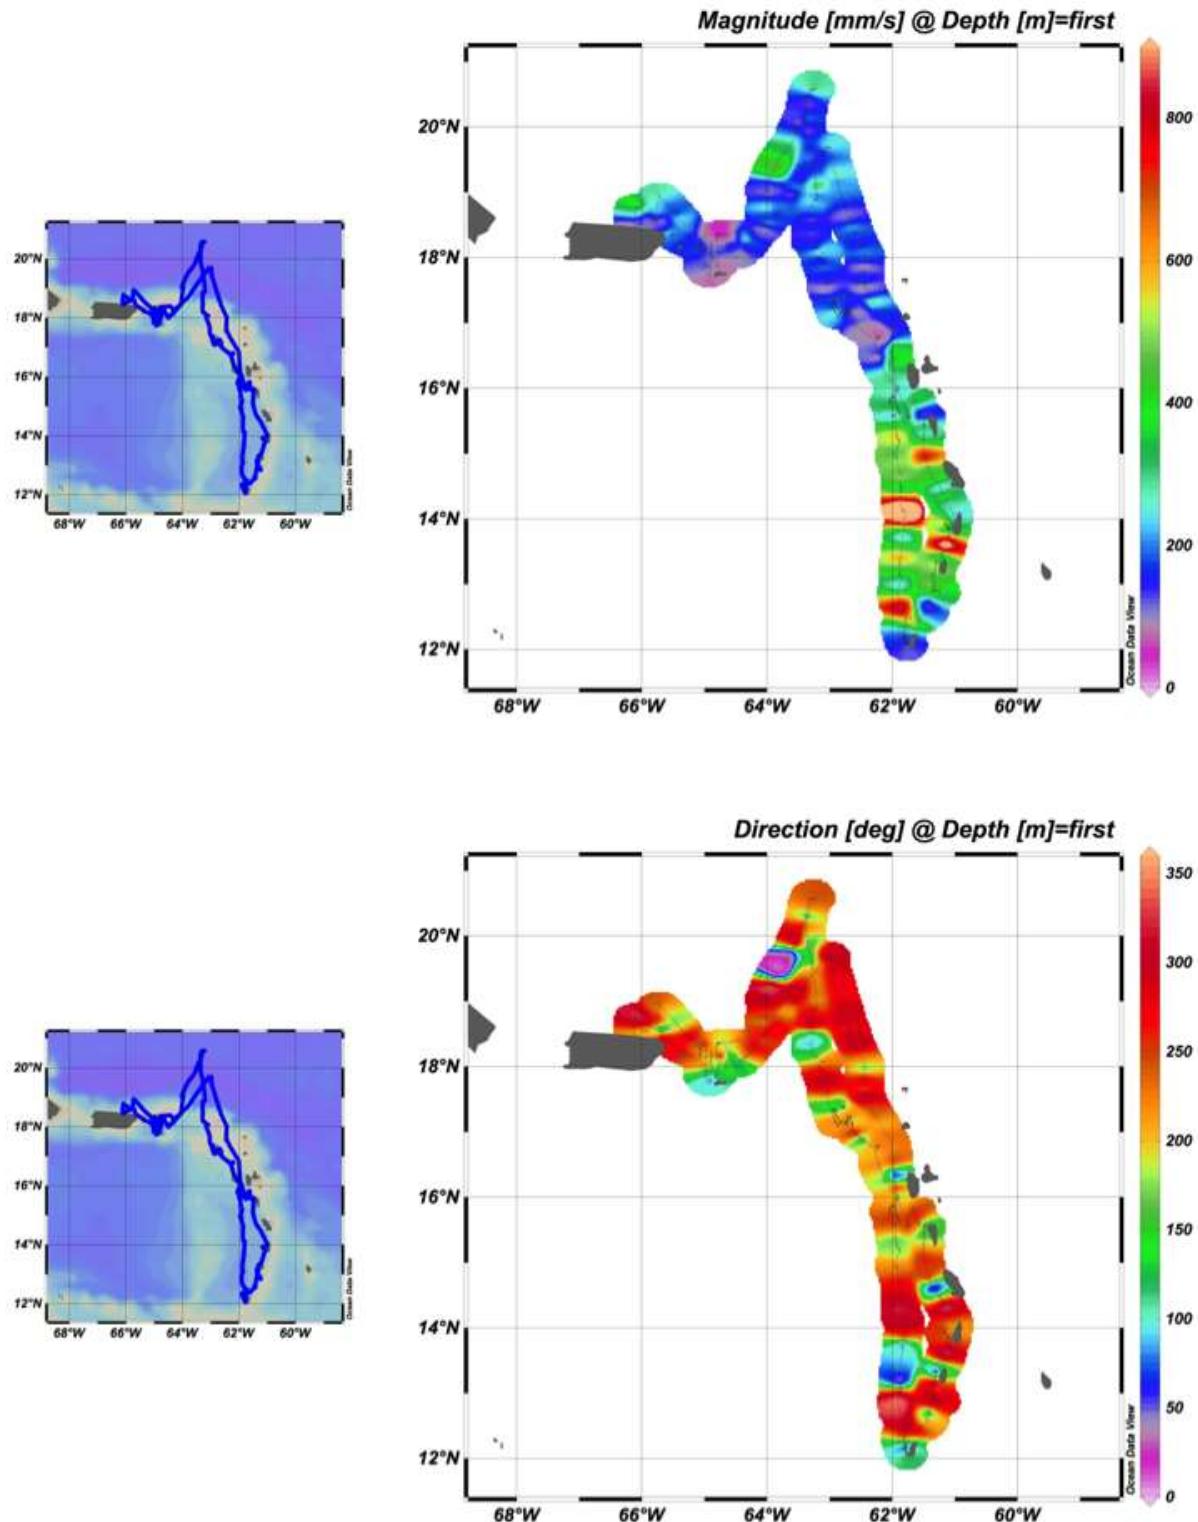

Table 4. CTD station data for C257. Physical characteristics of the water column were measured with a Seabird SEACAT Profiler Model SBE 19plus Conductivity-Temperature-Depth profiler. Vertical profile data available upon request.

Table 5. Hydrocast station data for C257. Physical characteristics of the water column were measured with a Seabird SEACAT Profiler Model SBE 19plus Conductivity-Temperature-Depth unit (Unit #4447) and three attached sensors. Accessory sensors include: Tx (143PR), CDOM (1258 WSCD), PAR (70187). Water samples were collected from 12 depths using niskin bottles and a surface sample (Associated SS #) using a clean, seawater flow-thru system (intake ~ 1-3m depth).

Table 6 continued. Neuston station data for C257.

Station # (C257-)	Gelatino us >2cm (#)	Types of Gelatinous	Other Nekton >2cm (#)	Types of Nekton	Tow Description and other notes	Surface station #
001	0		11	1 syngnathus pelagicus (3.5 cm), 1 crab (2 cm), 3 ballyhoo (1/5,3,4, cm), 1 unidentified fish (olive/grey color, ~2cm), 5 unidentified round fish	Small amount of Sargassum other (37 g), around 7 fronds, as well as 15 floating bladders	SS-005
002	0		2	1 needlefish, 1 sargassum crab	The tow contained a large amount of Sargassum other (250 g), with a high abundance of blue copopods and shrimp like organisms	SS-007
003	0		15	1 crab, 1 flounder larvae, 2 possible stomatopod larvae, 2 pipefish, 1 flying fish larvae	good amount of sargassum other, with one branch of other seaweed. Lots of orange shrimp like critters	SS-009
004	0		50	2 file fish, 1 unknown fish, 1 pipe fish, 43 puffer fish, 3 unknown fish	many different juvenile fish, sargassum, zooplankton and a crab larvae	SS-011
005	0		36	1 flying fish, 1 puffer fish, 1 pipe fish, 3 euphausids, 3 stomatopods, 3 fish larvae, 1 crab	Moderate amount of sargassum, zoopl. Are moslty shrimp	SS-013
007	2	2 salps	18	1 shrimp	observed biolum., many shirmp, many salps <2cm	SS-017
008	0		7	1 ballyhoo	we found plastic a ballyhoo, one halobate, sargassum and zooplankton	SS-019
009	1	1 salp	15	1 flying fish, 2 unidentified fish	Small amount of sargassum, a lot of myctophids, a flying fish, some alobates and copopods.	SS-021
010	0		3	1 flying fish, 1 small puffer fish	Large amount of Sargassum including all three species. Zooplankton were abundant with a lot of large shrimp and one large blue copepod. There was also three small fish, one being a young flying fish. Mostly clear zooplankton with lots of jelly bits	SS-023

Station # (C257-)	Gelatino us >2cm (#)	Types of Gelatinous	Other Nekton >2cm (#)	Types of Nekton	Tow Description and other notes	Surface station #
012	0		2	1 crab, 1 juvenile fish	Lots of isopods (< 2 cm), zooplankton small and grainy with some large small nekton	SS-026
013	0		0	2 land insects (1moth, 1 winged ant)	Very little plankton, lots of Sargassum as well as a moderate amount of brown and green seagrass (~70 strands 3-15 cm long)	SS-028
014	0		37	36 isopods	Large amount of Sargassum and isopods. White and black zooplankton. More gel substance than usual	SS-030
016	0		5	3 crabs, 3 fish larvae	SO MUCH MANITEE GRASS! (1920 g). Both Sargassum and grass tow contained shrimps, plastic	SS-032
017	0		19	4 Long Silver fish, 1 founder larvae, 1 shrimp, 1 needle fish, 1 puffer fish, 9 clear fish with red face, blue neck, 1 silver clear fish	Zooplankton brownish, small and grainy with some shrimp critters, lots of worm tubes from rinsed Sargassum.	SS-034
020	1	1 salp	4	1 fish (1cm, silver with dark stripes), 1 fish (0.5cm, Dark), 1 fish (1.5 cm, long and dark)	Quite a bit of zooplankton, small nekton and little else. Small crabs < 2 cm. Some small salps, no Sargassum, <30	SS-039
021	0		0		Lots of Shrimp, some small crabs (4), 9 juvenile fish less than 2 cm. 7 small pieces of seagrass, 2 pieces eel grass, some land plants	SS-041
022	4	4 salps	4	2 juvenile fish, 1 pipefish	Diverse-looking zooplankton, lots of small gelatinous, brownish-clear with blue copepods, dark pteropods	SS-043
024	0	none	4	none (other than myctophids)	Lots of copepods, some shrimp-like zooplankton, brownish yellow, pteropods, larger zooplankton, some gelatinous	SS-047
025	0		7	2 pufferfish, 1 larger juvenile fish, 4 long skinny fish	Sparse zooplankton, Sargassum colored, some small fish <2cm, some gelatinous organisms <2cm, lots of Sargassum floats: 73g	SS-049
027	0		3	Eel 2.5mL	rich with copepods and euphausiids, an eel, Halobates and myctophids	SS-051
028	0		8	1 flat sided dark fish, 6 small light blue fish, 1 small eel juvenile	there were a large number of gelatinous organisms and a couple of fish. There was more Sargassum fluitans than other.	SS-053
030	0		2	2 fish larvae	small amount of seagrass debris, including manatee grass and fragments of wide, flat bodied grass. Zooplankton mainly tan-brown	SS-057
032	0		45	10 flying fish, 1 stomatopod, 1 shrimp, 1 round spotted fish	A lot of fish, mainly large flying fish as well as over 60 Halobates crawling around. A few Small Crabs and other small fish amongst a large clump of Sargassum.	SS-059

Tow area was calculated using distance in meters between successive (every minute) GPS positions. Net opening was 1.0 m wide by 0.5 m tall with a net mesh of 335 μm . Zooplankton density is recorded as wet volume displacement per tow area (ml/m^2). Eel larvae (leptocephali), spiny lobster larvae (phyllosoma), and Lantern fish (Family Myctophidae), were sorted from net contents and recorded as numbers caught per tow. Micronekton, gelatinous micronekton, and plant material was removed using a 1 cm mesh sieve and biomass (ml) or length (cm) was recorded. Floating plastic was also removed from net contents, sorted as pellets (none collected entire cruise) or pieces and recorded as numbers collected per tow. Floating tar was sorted from the nets contents and recorded present or absent (none collected entire cruise). Floating *Sargassum* weed was removed, identified to species and measured in grams using a spring scale. Qualitative description of micronekton removed from the zooplankton biomass is provided, and when available biomass (ml) and length (cm) of specimens are recorded.

Table 11 continued. Dip Net station data for C257.

Station # (C257-)	Dip Net (A, B, C, etc)	Collection Conditions	Wind_Sea State (knots_direction_h eight m)	Aggregation Notes (windrows, fragments, etc)	Dip Net Collection Collection Setting (windrow, isolated, etc)
002	A	19.5 knots from 082 deg, seas 2m from east.		Periodic narrow (<1m) windrows all day.	narrow windrow
	B				isolated
006	A	12 knots from 110 deg, seas 1.5m from ESE		Intermittent, narrow windrows	isolated
	B				narrow windrow
006	C	8 knots from 110 deg, seas 1m from ESE		Frequent narrow windrows	narrow windrow
	D				narrow windrow
010	A	18 knots from ESE, seas 3m from ESE		Frequent narrow windrows	narrow windrow
	B				Isolated
010	C	18 knots from ESE, seas 3m from ESE		Frequent narrow windrows	narrow windrow
	D				narrow windrow
010	E	18 knots from ESE, seas 3m from ESE		Frequent narrow windrows	Isolated
016	A	18 knots from ENE, seas, 1.5m in lee of St Kitts from E		Frequent narrow windrows of mixed seagrass and Sargassum	narrow windrow
	B				narrow windrow
016	C	18 knots from ENE, seas, 1.5m in lee of St Kitts from E		Frequent narrow windrows of mixed seagrass and Sargassum	Isolated
	D				Isolated

Collection Conditions				Dip Net Collection
Station # (C257-)	Dip Net (A, B, C, etc)	Wind_Sea State (knots_direction_height m)	Aggregation Notes (windrows, fragments, etc)	Collection Setting (windrow, isolated, etc)
019	A	18 knots from east, seas 2m from E x S	narrow windrow	
019	B		narrow windrow	
019	C	18 knots from east, seas 2m from E x S	narrow windrow	
026	D		narrow windrow	
026	A	Winds NE 6 knots, seas 0.5m variable, lee of St Lucia	Scattered clumps and weak, dispersed, narrow windows Isolated	
029	B		Isolated	
029	C		Isolated	
029	A	Winds 21 knots from 100 deg, seas 1.5m from east	Numerous windrows, narrow and wide (>0.5m width)	narrow windrow
029	B		Wide windrow	
029	C	Winds 16 knots from 100 deg, seas 1.5m from east	Numerous windrows, narrow and wide (>0.5m width)	Isolated
031	D		Wide windrow	
031	A	Winds 8 knots from N x E, seas less than 0.5m	Isolated clump of sargassum, no other visible sargassum for several nms.	Isolated
033		Winds SE x E, 120 deg at 12 knots, seas 2m.	Massive windrows and mats observed. Largest close to 100m2. Predominantly Sn8, though 1 clump of Sn1 and a few clumps of Sf.	
036		Winds 12 knots from E x N, seas 2m	Many closely spaced (~50m apart) narrow, loosely packed windrows. Predominantly a patch of Sf that we were in during Morning Station, once we started sailing we lost all Sargassum.	
039		Winds 12 knots from ESE, seas 1.5m		

Station #	Dip Net (A, B, C, etc)	Collection Conditions	Wind_Sea State (knots_direction_h eight m)	Aggregation Notes (windrows, fragments, etc)	Dip Net Collection	Collection Setting (windrow, isolated, etc)
040			Winds 12 knots from 1000 deg, seas 1.5m from 070 deg	Many isolated fragment, and several windrows of narrow to wide (~1m) sizes. Over 95% of the collection was small fragments of Sn8, a few fragments of Sn1 and Sf.		
043	A		Winds 18 knots from east, seas 3m from east.	Narrow windrows ~100m apart, predominantly Sn8 and the rare clumps of Sf and Sn1 that were targeted for analysis.	0.5m wide windrow	
	B				0.5m wide windrow	
	C				0.5m wide windrow	
	D				0.5m wide windrow	
044	A		Winds from east at 12 knots, seas, 1m from east.	Periodic narrow (<1m), loosely dispersed windrows and scattered, isolated clumps.	Isolated	
	B				Isolated	
	C				Isolated

Table 13. Student research topics for C257.

Oceanography Project	Student Author
Nutrients and Primary Production in relation to Island Proximity	Samuel Beard
Where Along Our Cruise Track is Plastic most Densely Found?	Kathleen Brickner
Bathymetry and Island Age, Slope steepness and distances from slopes to Islands	Katherine Brill
Factors that determine the Fish Community	Julio Ciani
Sea Floor Composition of The Lesser Antilles	James Conley
Sargassum Community	Molly Disbrow
Marine Mammal Patterns in Relation to Proximity to Land	Robert Foley
Productivity Parties in the Caribbean Sea	Antonia Hall
Physical Influences on Seafloor Sediment Grain Size in the Lesser Antilles	Thomas Hiura
Nutrient Concentrations due to Depth & General Locale	Annie Reardon
Diel vertical migration and diversity of zooplankton	Nicole Reasonda
Seabird Sightings in the Lesser Antilles	Harmony Richman
Currents of the Lesser Antilles	Lillian Robinson
The Ups and Downs in the Life of Zooplankton	Emily Rubinstein
Reef Development as an Indication of the Geologic Age of Islands	Colin Terry
<i>Sargassum</i> Species Distribution Project	Sarah Tyrrell
<i>Sargassum</i> Mobile Fauna	Samuel Wooster
<i>Sargassum</i> morphology	Corey Wrinn
