2. Description of Project

2.1 Nature and objectives of the project:
Determine the relative abundance and age structure of herring spawning aggregations in the Celtic Sea and south west Ireland as part of an annual spawning stock survey. Data collected is used during the assessment of this stock for fishery applications within ICES (HAWG).

2.2 If designated as part of a larger scale project, then provide the name of the project and the Organisation responsible for coordinating the project:
Na

2.3 Relevant previous or future research projects:
Part of a survey time series first established in 1989

2.4 Previous publications relating to the project:

3. Geographical Areas

3.1 Indicate geographical areas in which the project is to be conducted (with reference in Latitude and longitude in decimal degrees, including coordinates of cruise/track/way points/sampling stations). Please provide coordinates in a separate excel spreadsheet.

Southwest of Ireland, Celtic Sea and Celtic Deep
52°N to 50°30'N and 05°40'W to 10°W

Exact track waypoints as yet to be determined. Chart enclosed the proposed geographical footprint of the 2017 cruise track detailing replicate surveys (grey/orange parallel lines). High intensity transect surveys (spacing <5nmi) may be carried out on high density aggregations of herring occurring within the overall survey boundary. Survey will follow similar transect spacing (8 nmi) as in 2019. Exact track line waypoints will be made available as soon as they are finalised.

3.2 Attach chart(s) at an appropriate scale (1 page, high-resolution) showing the geographical Areas of the intended work and, as far as practicable, the location and depth of sampling Stations, the tracks of survey lines, and the locations of installations and equipment.
