2. Description of project (Attach additional pages as necessary)

2.1 Nature of objectives of the project:

The survey aims to fulfill Ireland's requirements under the Joint Assessment and Monitoring Programme (JAMP) of the 1992 'Oslo Paris Convention for the Protection of the North East Atlantic' (OSPAR). This requires the answering of 3 key questions:

1. What is the spatial distribution of nutrients?
2. Are nutrient concentrations changing over time (trends)?
3. Are nutrient concentrations significantly elevated (>50%) above salinity related and/or regionally specific background levels?

Question number 3 requires that we know what the 'background levels' are. This is why we would like to extend the scope of our sampling to include more samples in the Celtic Sea and one transect across St. George's Channel, allowing us to make an assessment of the nutrient inputs to the Irish Sea.

2.2 Relevant previous or future research cruises:

The proposed work in UK waters is a repeat of what was done in the last six years. The Marine Institute has been carrying out a winter nutrients survey in the Irish Sea since 1990 and plans to continue the annual surveys for the foreseeable future.

2.3 Previously published research data relating to the project:

McGovern, E.; Monaghan, E.; Bloxham, M.; Rowe, A.; Duffy, C.; Quinn, A.; McHugh, B.; McMahan, T.; Smyth, M.; Naughton, M.; McManus, M. and Nixon, E. *Winter Nutrient Monitoring of the Western Irish Sea – 1990 to 2000*. Marine Institute Marine Environment and Health Series, No. 4, 2002.
