## 2 - DESCRIPTION OF THE PROJECT

### 2.1. Nature and objectives of the project :

Collect of live cephalopods (cuttlefish) for scientific research of EA 3211 (Physiologie du comportement des céphalopodes) University of CAEN, France  
 The field of research of the E.A. 3211 is represented by a behavioural neurosciences approach of learning and memory processes in cuttlefish *Sepia officinalis*. We particularly studied a group of central nervous structures, called the vertical lobe system, which are involved in memory processes.

### 2.2. Relevant previous or future research cruises :

Collect of live cuttlefish in the Channel "baie des casquets"

### 2.3. Previously published research date relating to the project :
