## **Cruise 1408A**

### **PROGRAMME**

4-18 December 2008

**Loading:** Fraserburgh, 2 December 2008

**Unloading:** Fraserburgh, 18 December 2008

**In setting the cruise programme and specific objectives, etc the Scientist-in-Charge needs to be aware of the restrictions on working hours and the need to build in adequate rest days and rest breaks as set out in FRS' Working Time Policy (Lab Notice 34/03). In addition, the Scientist-in-Charge must formally review the risk assessments for the cruise with staff on-board before work is commenced.**

**In the interest of efficient data management it is now mandatory to return the Cruise Report, to Iain Gibb and the Cruise Summary Report (old ROSCOP form) to Dougal Lichtman, within four weeks of a cruise ending. In the case of the Cruise Summary Report a nil return is required, if appropriate.**

### **Personnel**

Robert Watret           (SIC)  
Iain Gibb                 5-10 December  
Martin Burns  
M Gault

**Out-turn days per project:** MF01ta - 15 days

### **Equipment**

Sandeel dredge (4' scallop dredge with 6" teeth and spare toothbars) with towing bar with camera attachment.

Day Grab  
RoxAnn  
TV Camera  
Minilogger

### **Objectives**

- 1) To determine the abundance, length and age of sandeels in the sediment in regions east of the Firth of Forth and Turbot bank.
- 2) To collect and preserve frozen samples of sandeels for analysis of age and maturity.

## Procedure

All gear will be loaded onto the vessel on 2 December. Scientific staff (except I Gibb) will join the vessel on 4 December. I Gibb will join the vessel on the evening of 5 December, at a suitable port, and will depart the vessel on the evening of 10 December. Two regions important to sandeel fishing (Figure 1) will be surveyed, near the Firth of Forth and the Turbot bank. In the first half of the survey a series of 8 dredge stations (previously surveyed between 1999 and 2003) near the Firth of Forth will be sampled (Table 1). Further stations in this region will be sampled if time permits. In the second half of the survey, grabs will be taken in the Turbot Bank, in areas around station no's 20-26 (Table 1) in order to identify suitable sandy areas for dredging. At all stations the dredge tows will be repeated. Dredge duration will be approximately 10 minutes.

At each dredge station, all sandeels will be identified to species, measured and otoliths (5 per half centimetre) will be taken for age determination. From each of the two survey locations, sub-samples of 100 sandeels < 9 cm and a 100 sandeels > 9 cm (age 1+) will be individually frozen for later analysis. Following the completion of survey work, *Alba na Mara* will return to Fraserburgh for unloading on 18 December 2008.

Normal contacts will be maintained with FRS.
