DURATION: 21 – 28 June 2016

LOCATION: North Sea (English NE)

AIMS:

1. To conduct a standard underwater TV survey of *Nephrops* burrow densities on the Farn Deeps grounds, 55° 35' - 54° 45' N and 1° 30' - 0° 40' W, and to evaluate *Nephrops* abundance (110 stations).
2. To conduct seabed multibeam survey (at each TV survey station).

PLAN:

CEFAS ENDEAVOUR will sail on 21st June from Lowestoft and will return to the same port on 28th June, 2015. This survey involves 24 hour procedures and the scientific staff will be working 4/8 hours shifts (2 people per shift).

Under objective 1&2:

Video data will be collected from cameras mounted on a towed sledge. On the Farn Deeps grounds, 110 stations will be visited with the aim of recording a clear 10 minute continuous video transect of the sea bed at each station (Figure 2, Table 1).

A multibeam run will be conducted at each TV survey station.

All video will be analysed and the counts confirmed at sea. Data will be entered and QC onboard.

GEAR:

TV sledge: The sledge will be towed (0.7 Knot) against the tide and 10 minutes of good footage will be recorded. This corresponds to ~ 200m of track.

Multibeam: Change tower to side gantry. Multibeam has to cover the TV tracks and cross both sides of the ring. Multibeam needs to run slightly off set (~ 50m, speed 5 to 6 knots).
