DURATION: 4 - 14 October

LOCALITY: North Sea (English NE and E Coast)

AIMS:

1. To conduct a standard underwater TV survey of Nephrops burrow densities on the Farn Deep grounds, $55^{\circ} 35'$ - $54^{\circ} 45'$ N and $1^{\circ} 30'$ - $0^{\circ} 40'$ W, and to evaluate Nephrops abundance.
2. To characterise sediment features at and between TV survey stations using swathe bathymetry.
3. To carry out a preliminary survey of the Botney Gut Silver Pit grounds $54^{\circ} 15'$ - $53^{\circ} 35'$ N and $1^{\circ} 35'$ - $3^{\circ} 10'$ E to evaluate Nephrops abundance.

PLAN:

CEFAS ENDEAVOUR will sail on 4 October and will return to Lowestoft on 14 October. Video data will be collected from cameras mounted on a towed sledge. On the Farn Deep grounds, 110 stations will be visited (80 priority 1 stations; 8 priority 2 stations; 17 priority 3 stations and 5 additional stations) with the aim of recording a clear 10 minute continuous video transect of the sea bed at each (Figure 1).

If weather and logistics allow 36 stations on the Botney Gut Silver Pit grounds (21 priority 1 and 15 priority 2) will be visited and the same data collected (Figure 2).

All video will be analysed and the counts confirmed at sea.

JON ELSON
