CRUISE REPORT

F.R.S. "CLUPEA"

11th - 23rd December, 1961.

Two trawl hauls were done to complete the routine Moray Firth survey. Thereafter echo-searches were carried out over the upper reaches of the Moray Firth.

No herring traces were found during the first week. Concentrations of herring plumes were located off Burghead and Nairn during the second week and the purse seine was shot twice but no herring were caught.
