

CRUISE REPORT

F.R.S. "CIUPEA"

11th - 16th June 1962

Personnel

Mr. A. D. McIntyre, S.S.O.
Mr. D. J. Murison, Sci. Asst.

The start of the cruise was delayed due to the illness of a member of the crew, but the ship left Buckie on 12th June and was joined at Ullapool by the scientific staff at 2200 hrs on the following day.

During the rest of the week gale force winds blew more or less continuously, but since these were from the south west it was possible to make a passage between the working positions.

Hydrographic and core sampling was done in Loch Kishorn, Loch Carron, Loch Duich, Loch Hourm and Loch Nevis on 14th June and in Little Loch Broom and Loch Broom on the next day.

The work was completed at midday on Friday 15th June and the scientific staff left the ship at Ullapool.
