## Data Description

This cruise report provides a record of data collected aboard the SSV *Corwith Cramer* during Cruise C251 (U.S. State Department Cruise 2013-090). The cruise track of C251 (Figure 1, Table 1) was a passage from San Juan, Puerto Rico to St. Croix USVI with stops at Antigua, the Grenadines and Montserrat. Aspects of the southwestern North Atlantic and eastern Caribbean were recorded on C251 including currents, temperature, salinity, chlorophyll, these are displayed in Figures 2-9. The cruise participants are listed in Table 2. Student projects aboard C251 are listed in Table 3.

During the six week voyage we collected samples or data at 50 discrete oceanographic stations (Appendix A), and 43 surface stations (Appendix B). Chemical properties of seawater with depth are contained in Appendix C. The CTD information is listed in Appendix D and the profiles are illustrated in Appendix E. Lists of biological net samples are contained in Appendix F and summaries of sediment collections are listed in Appendix G.
