

BATHYMETRIC AND MAGNETIC TRAVERSES
OVER THE SOUTH WEST MARGIN OF THE
ROCKALL PLATEAU

P. R. MILES

R. R. S. 'Discovery' Cruise 60

26th February - 22nd March 1974

DATA REPORT No. 9

1976

Institute of Oceanographic Sciences,
Wormley, Godalming,
Surrey GU8 5UB

This document describes geophysical data collected by the Deep Sea Floor Group of the Institute of Oceanographic Sciences (Wormley), and continues the series of I. O. S. Data Reports as shown overleaf. The series is intended to provide an efficient means of documenting the data not only for internal use but also for distribution to the scientific community.

On citing this report in a bibliography the reference should be followed by the words UNPUBLISHED MANUSCRIPT.

ABSTRACT

This report contains bathymetric and magnetic data collected during Cruise 60 on R. R. S. Discovery in February-March, 1974. The profiles, tables and track charts were all generated automatically from data files stored on disk by the shipboard IBM 1800 computer. Included in the report is a description of methods used in data acquisition and preparation.

R.R.S. DISCOVERY CRUISE 60

CRUISE OBJECTIVES

The principal objectives of this cruise were to execute seismic reflection profiles on the south west margin of the Rockall Plateau and in the south western approaches to the English Channel which, with magnetic and bathymetric measurements, velocity data from Disposable Sonobuoys and dredging, would fulfil the following aims:

- (a) To examine the nature of continent-ocean boundary on the south west margin of Rockall Plateau with particular emphasis on the relationship of spreading rate changes to the structural and stratigraphic history.
- (b) Comparison of the continental margin with the 76 m. y. spreading discontinuity in the oceanic crust to the west of Porcupine Bank.
- (c) Comparative study of ensimatic rift margins at 52°N 21°W, 53°N 25°W.
- (d) Eastward extension of the Gibbs Fracture Zone and southward extension of the east margin of Rockall Plateau.
- (e) Comparative geological history of the Celtic Sea, Porcupine Seabight and Rockall Trough.
- (f) JOIDES site surveys in the Hatton-Rockall Basin and in the Rockall Trough.
- (g) Dredging on Fangon Bank, Editoras Bank and Porcupine Bank.
- (h) Disposable sonobuoys were to be used to obtain velocity data in areas of thick sediments. Trials to measure the efficiency and performance of the new hydrographic winch and comparisons of noise levels between I.O.S. and small diameter Geomecanique arrays.

INSTRUMENTATION

Magnetics: A Varian V-75 proton magnetometer was operated throughout the cruise, the instrument malfunctioning twice through pre-amp and power supply failure. The data were recorded in analogue form on a chart recorder and also stored in digital form on the shipboard computer as two minute values. Erroneous data, normally caused by radio transmission interference from the ship, were corrected during the editing of the data files on board. No corrections were made for either daily variation or the effect of the ship's heading.

Bathymetry: An I. O. S. Mark III Precision Echo-Sounder was used to record continuous soundings on a mufax display at an assumed velocity of 800fms/sec. Except when the ship was on station, readings were made at six minute intervals and manually entered into the computer. Matthews corrections were automatically applied by the computer from the navigation data.

NAVIGATION

The following navigational aids were used:

- (a) Satellite Navigation System using two Magnavox 702CA receivers working in conjunction with the shipboard IBM 1800 computer.
- (b) LORAN - C

The computer was used throughout the cruise to control the navigation and regular checks were made on its performance using manually prepared bridge plots. The satellite navigation was used as the prime navaid throughout the cruise owing to problems over the logging of LORAN - C fixes.

The ship's position was determined from satellite fixes used in conjunction with a dead reckoning derived by the computer from inputs of the I. O. S. two component EM log and the gyrocompass. For each accepted satellite pass the dead reckoning was automatically adjusted by the computer to agree with the satellite fixes, the amount of adjustment being attributed to a 'current' which was used to compute adjusted values of the ship's position at two minute intervals. As the computed current can be considered the sum of actual ocean current, satellite fix error and EM log calibration error, all satellite fixes giving rise to a current greater than 2 knots were rejected as erroneous. After a track update, dead reckoning continues from the last accepted satellite fix.

SHIPBOARD ACQUISITION, REDUCTION AND STORAGE OF DATA

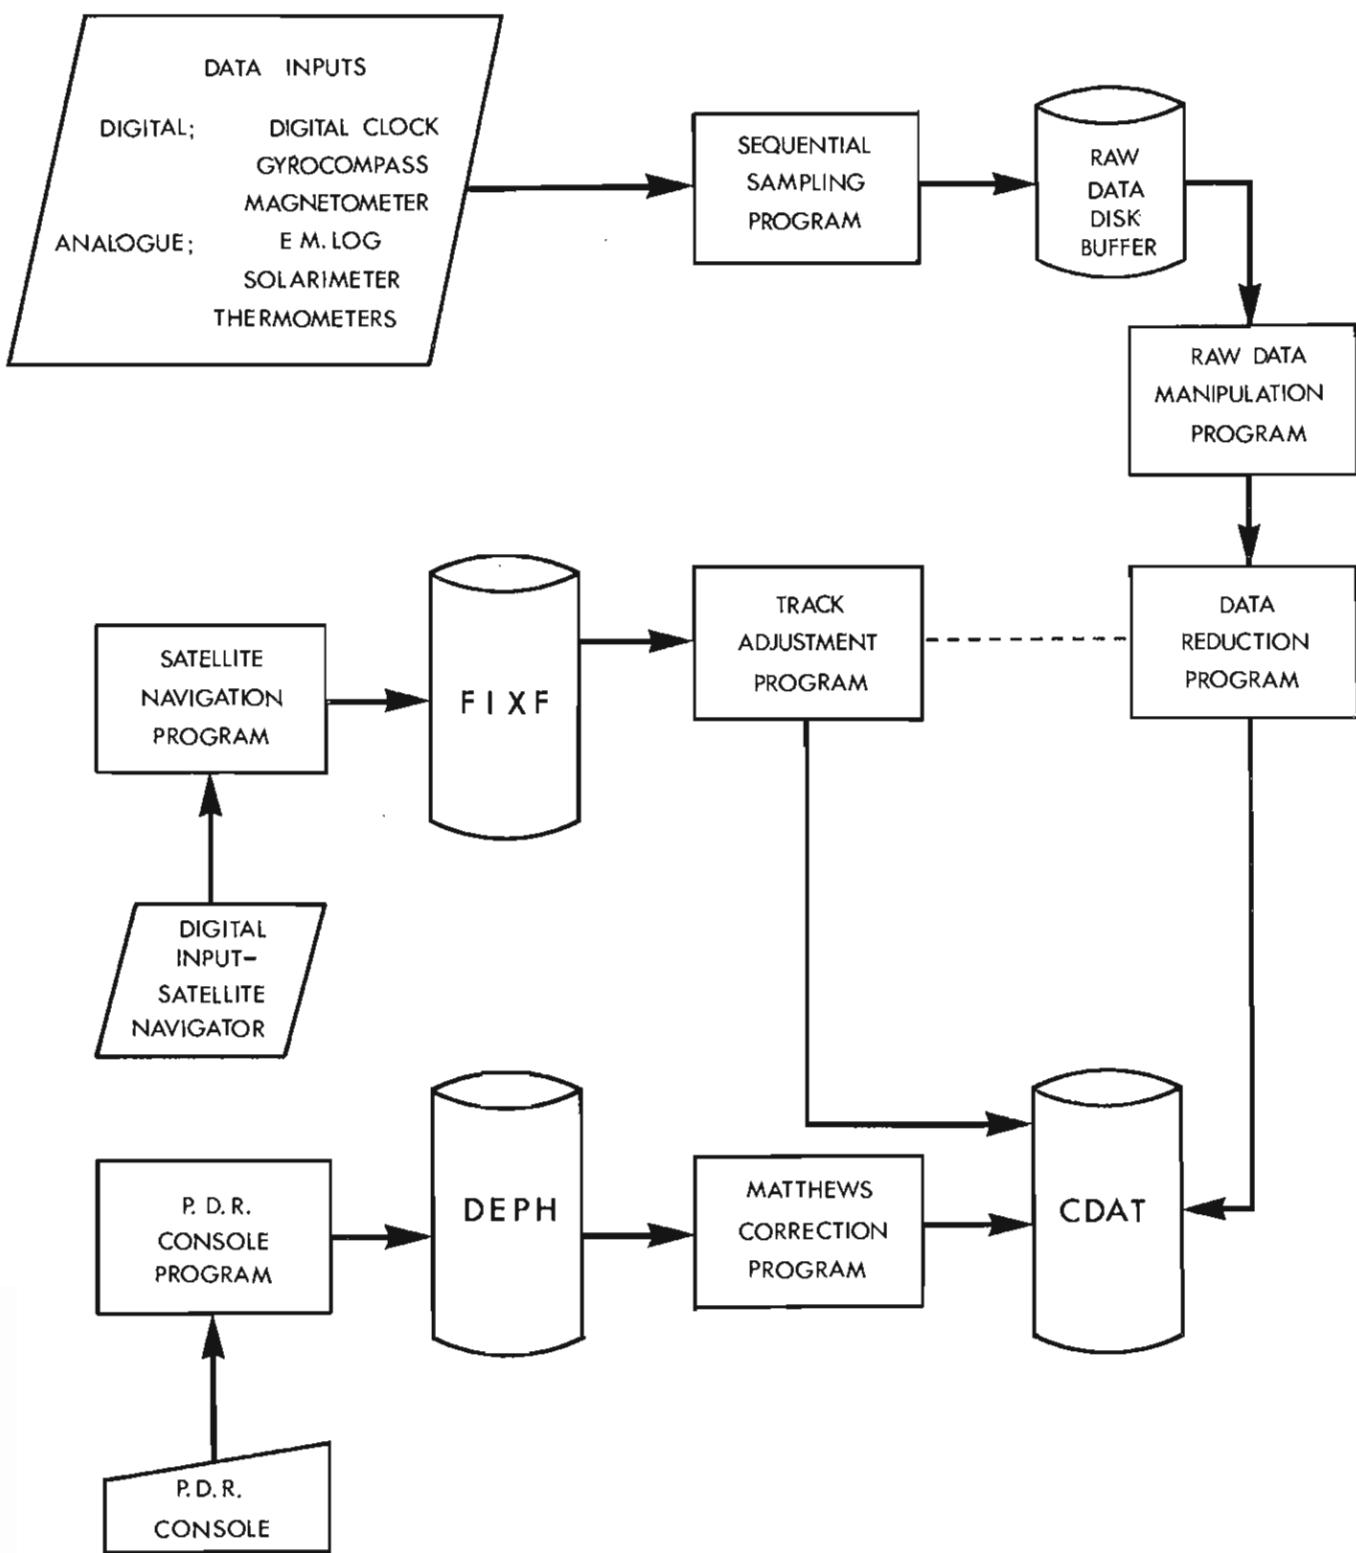

The basic configuration of the shipboard data system is summarised in figure (2). The Sequential Sampling Program controls the sampling of the digital clock, gyrocompass, magnetometer, 2 component e. m. log and the meteorological instruments, buffering the data to a raw data disk buffer. Two of these buffers share the data sampling, each for two minute intervals when the sampling program switches buffer and initiates the raw data manipulation program to yield two minute values of the sampled variable. The data are then processed in the data reduction program to reduce total magnetic field values to anomaly values by removal of the International Geomagnetic Reference Field (Mead 1970) and to correct the measured wind's velocity for the effect of the ship's velocity. The corrected data, together with the day number and time are written to the processed data file, CDAT. At this stage the program also updates the dead reckoning position of the ship and stores it in CDAT.

When the satellite receiver locks on to a satellite, an interrupt is given to the computer which then reads the satellite data and stores it on disk. These interrupts occur every two minutes during a satellite pass and on completion a series of programs are executed to decode the information and calculate the geographical position. A summary of the data is then stored on the satellite fix file FIXF.

After each satellite pass the Track Adjustment Program is executed to update and adjust the dead reckoning to agree with the satellite fixes. Fixes giving 'currents' of greater than 2 knots are rejected, and adjusted values of position, course made good, speed made good and distance run are written to CDAT, the data reduction program being recalled to adjust IGRF for anomaly calculations.

Depths are entered manually into the system through the P. E. S. Console as day number, time and depth (uncorrected fathoms). The Matthews Correction Program is executed to convert the depth data to corrected fathoms, computer approximated curves being used in the correction (Howarth 1970), and depth data is entered to CDAT during each course update.

General purpose plotting programs are available under the MPX operating system to

Fig(2) SHIPBOARD AQUISITION, REDUCTION & STORAGE OF DATA

display data stored on the CDAT disk files. Profiles of the observed variables against either time or distance can be plotted and Mercator projection track charts with, if required, plotted numerical values of an observed variable may be generated. For Cruise 60, a complete series of 1:1,000,000 track charts and profiles of geophysical and meteorological variables were produced for both immediate interpretation and identifying errors in the stored data.

CONTENTS OF SHIPBOARD DATA FILES (CDAT)

CDAT is the main corrected data file containing 53 words per record and a nominal data frequency of two minutes.

<u>Word</u>	<u>Field</u>	<u>Unit</u>
1	Day	
2	Time	Minutes *10
3	Latitude	Degrees
4	Latitude	Minutes *100
5	Longitude	Degrees
6	Longitude	Minutes *100
7	Navigational Status	
8 - 13	Status of data in words 14 - 53	
16	Gyro in Use	Degrees *10
17	Course through Water	Degrees *10
18	Speed through Water	Knot *100
19	Course made Good	Degrees *10
20	Speed made Good	Knot *100
21	EM Log Velocity North	Knot *100
22	EM Log Velocity East	Knot *100
23	Corrected Wind Speed	Knot *100
24	Corrected Wind Direction	Degrees *10
25	Thermometer Starboard. Dry	°C *10
26	Thermometer Starboard. Dry-wet	°C *10

37	Corrected Depth	Fathom
38	Matthews Area	
39	Distance run in Day	Mile *100
40	Barometric Pressure	Mbar *10
41	Hull Temperature	°C *100

EDITING OF DATA FILES

Navigation, bathymetric and magnetic data were edited on board using the MPX operating system. The procedure involved generation of navigation plots, bathymetric lists and magnetic profiles every 24 hours and their systematic analysis for errors.

Navigation was assessed by inspecting plots of corrected D. R. data for spurious values of speeds and courses, usually in the form of spikes, and by comparing a running plot kept by the bridge with daily computed plots of the ship's track and satellite fixes at a scale of 1 in 1×10^6 . The computer automatically rejected fixes which gave rise to apparent currents between fixes of greater than 2 kts. Other satellite fixes were manually rejected because of too low or too high elevation. Whenever a fix was manually rejected or accepted, an off-line program was run to do the course corrections and recompute regional magnetic fields and Matthews Area corrections.

The stored total magnetic field values were plotted in the same form as that on the chart recorder of the magnetometer. The two records were compared for differences and in this way errors, normally in the form of data spikes, were detected and corrected.

The P. E. S. record was removed from the Mufax recorder daily and checked for mistakes. The record was then compared with a list of depths logged in the CDAT file. Any corrections were re-entered via the P. E. S. input console and written into the CDAT file during the next course correction update.

Charts of the ship's track and depth were plotted for the geophysical survey and 1 in 1×10^6 tracks of the complete cruise were drawn on Admiralty plotting sheets.

Data Transfer to National Academy of Sciences Format

Once edited the magnetic, bathymetric and navigational data stored on disk are transferred to cards in the National Academy of Sciences merged-merged format using the program MMERG. The format has a certain degree of national and international acceptance and as such is useful for data exchange purposes.

Each data record consists of a card punched:

<u>CC</u>	<u>DESCRIPTION</u>	<u>NOTES</u>
1 - 8	Ship, cruise and identification	
9 - 13	Time zone. GMT = 00	Format $\pm F4.2$
14 - 15	Year	Last two digits
16 - 17	Month	Format I2
18-19	Day	Day of month
20	Blank	
21-22	Hour	
23-25	Minute	Format F3.1
26-33	Latitude, north +ve	Format $\pm F6.4$
34-42	Longitude, east +ve	Format $\pm F7.4$
43	Navigation point identification	1 for fix; 2 for course change. Ø/blank for data point.
44	Fix description	9 for satellite
45-52	Blank	
53-57	Uncorrected fathoms	Format F5.1
58-62	Corrected Metres	Format I5
63-64	Matthews area	Format I2
66-70	Total magnetic field, gammas	Format I5
71-75	Magnetic anomaly	Format $\pm I4$
76-80	Free air anomaly	Format $\pm I4$

All decimal points are implied.

DATA PRESENTATION

This report is intended to meet as effectively as possible the varying requirements of the personnel most likely to make use of the bathymetric and magnetic data of Cruise 60. Because of the large volume of data involved, it is not considered practical to include listings of the original CDAT data files. The data is presented at three levels of processing:

- (a) Summarized listings of raw data
- (b) Summarized listings of reduced data
- (c) Profiles of reduced data

The computing aspects of the data presentation are given in figure (3). It is intended that when used in conjunction with either the 1:1,000,000 track charts or the navigation tables produced by NAVPT, the data should be suitable for incorporation into compilation charts or for further computer orientated calculations. For a more direct scientific interpretation of the data, the 1:2,400,000 profiles are supplemented with a track chart at the same scale overlain on a bathymetric chart. Reduced copies of the original P. E. S. records are also included in the report to enable study of the bathymetry in more detail than is given by either the profiles or the listing.

(1) Profile Location Sheets

The ship's track for cruise 60 has been manually prepared on a bathymetric chart of 1:2,400,000 at a standard latitude of 41°N. Except for the 500 metre contour, the contour interval is 1000 metres which illustrate the prominent features of the sea floor relief and provides a context in which to study the profiles presented in Section A. The profiles have been plotted at the same distance scales as the profile location sheets and are identified on the track by a circled figure representing the start of each profile. Changes in day number are also shown on the tracks by a mark at 0000 hrs. annotated with the new day number.

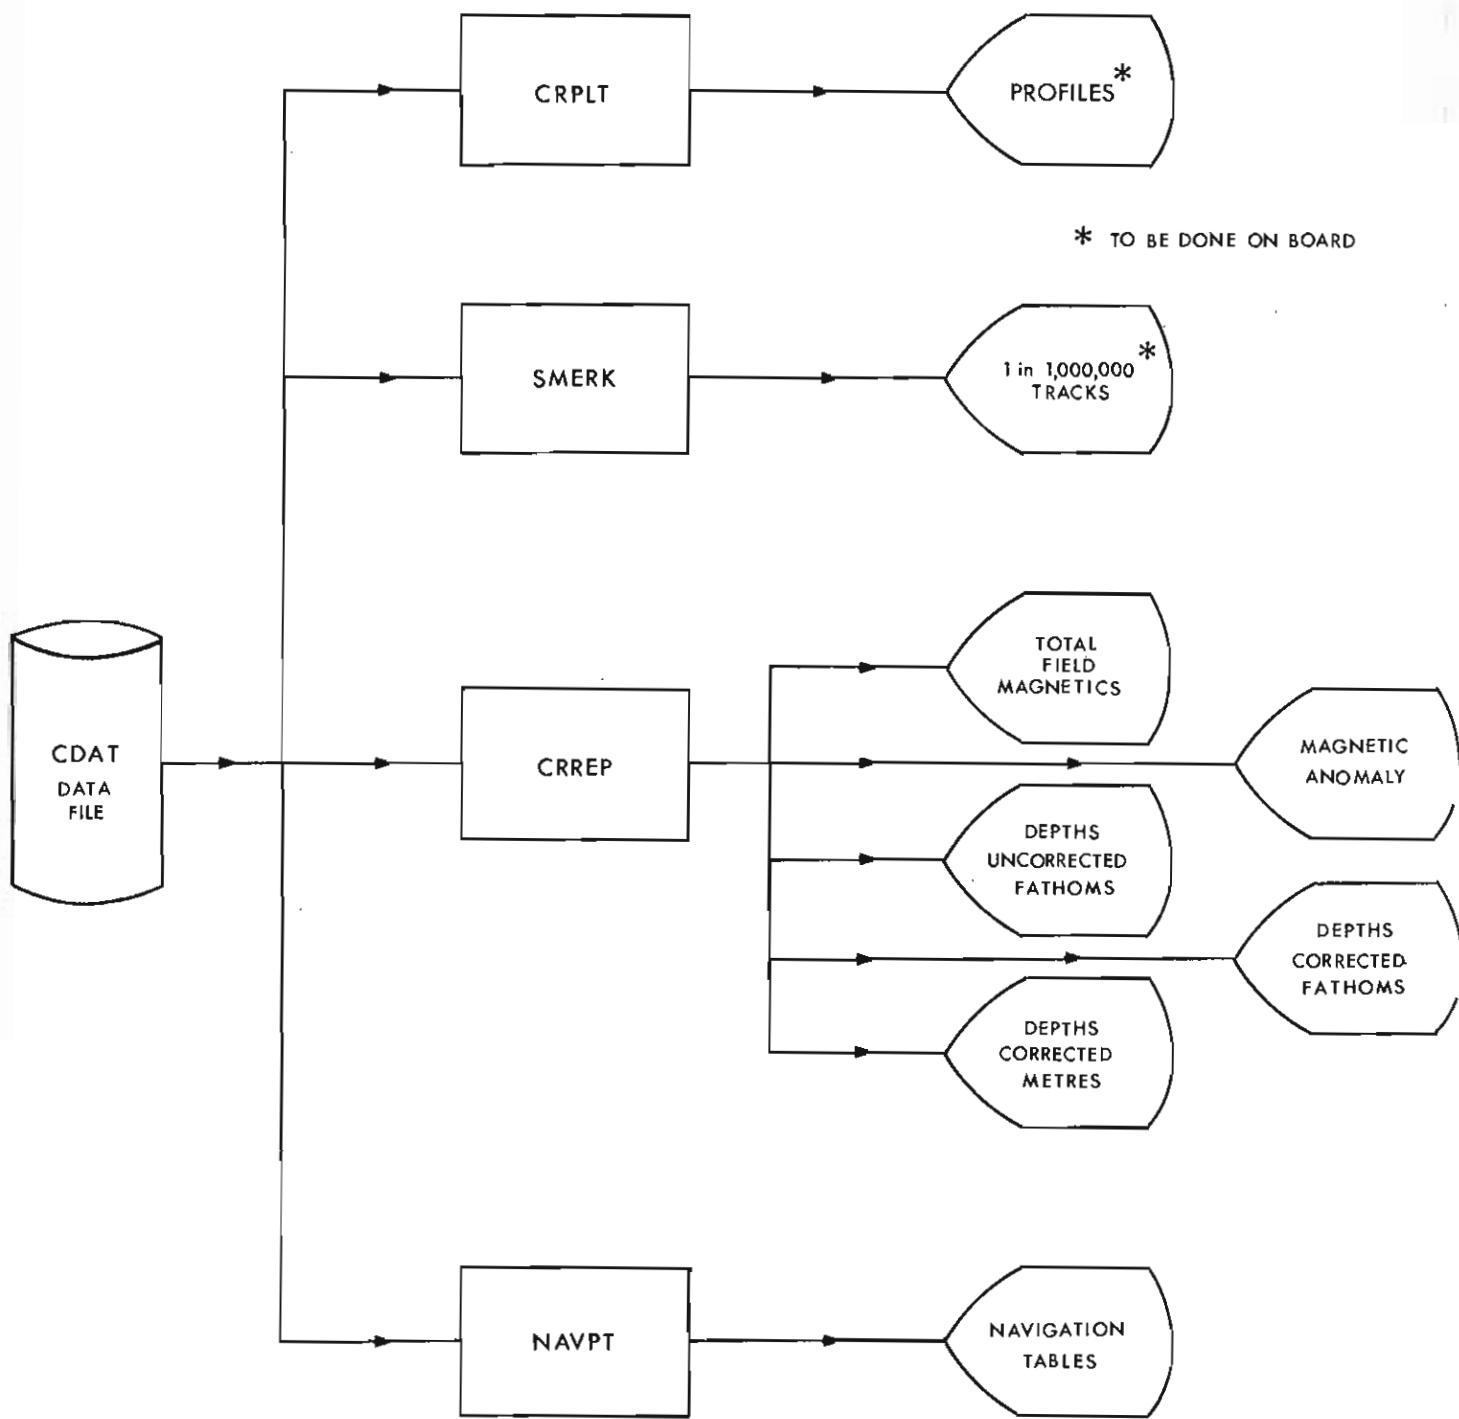

Fig (3) DATA DISPLAY

(2) Section A

This section contains profiles together with reduced copies of the original P. E. S. records. Magnetic anomaly, corrected depth, course made good and speed made good were plotted from the edited CDAT file using CRPLT. The parameters are each plotted against distance run along track in nautical miles from the start of a leg - the distance being scaled to a 1:2,400,000 Mercator grid at 41°N enabling the profiles to be overlain on the profile location sheets. The distance run axis is marked every 10 n. miles and annotated every 50 n. miles; a time axis in G. M. T. is also included so that the profiles can be correlated with the P. E. S. records and tabular listings of data in sections C and D. The magnetic anomaly is plotted at a scale of 400 gammas/inch with a nominal range of ± 600 gammas. However this range is automatically adjusted by CRPLT for each profile so as to cope with the range of data values in CDAT. Each 2-minute magnetic anomaly value is plotted but the pen is lifted each time there is a data gap in excess of 4 minutes. Corrected depth is plotted at a scale of 2000 fms./inch with a nominal range of 0-4000 fms. The vertical exaggeration of the bathymetric profiles is 16-9:1 at 41°N. As depth is not continuously recorded at 2-minute intervals, each depth reading is marked on the profile by a small tick and successive readings are joined by a straight line. Gaps in data therefore appear as straight lines without tick marks:

Each profile is accompanied on the facing page by a reduced copy of the relevant section of the P. E. S. record. As the P. E. S. records against time and not distance, it is impractical to provide a one-to-one correspondence in horizontal axis scale between the profiles and P. E. S. records. Correlations between the two have to be made by time, the P. E. S. records are therefore annotated with hour marks. The recording depth phase of the P. E. S. records are also shown, the 100 fathom lines within this phase are discernable on the original record as horizontal lines.

(3) Section B

This section contains a listing of the significant navigation points and computer-generated navigation track charts. The navigation points were selected from the CDAT file using NAVAD and provide a linearly interpolatable track to within 0.25 n.

miles of that contained in CDAT. The track charts were plotted from the two minute positions in CDAT using SMERK and are scaled at 1:1,000,000 at the 57°N standard latitude. Each hour is marked on the track and annotated, the day number being given every six hours. The positions of accepted satellite fixes were automatically plotted on the track charts with time in hours and minutes.

(4) Section C

This section contains tabulated 6 minute listings of the uncorrected magnetic and bathymetric data. All data presented in sections C and D has been produced using CRREP and CDAT. The data file is searched for significant maxima or minima not sampled on the six minute interval and these are written onto the field of the previous six minute sample followed by an asterisk and the time recorded as minutes past the hour.

(5) Section D

This section tabulates six minute listings of the reduced magnetic and bathymetric data. Magnetic anomaly (total magnetic field minus the International Geomagnetic Reference field) and the corrected depth in both fathoms and metres are read from CDAT.

(6) Section E

This section contains station position tables.
